Important: READ THESE INSTRUCTIONS CAREFULLY BEFORE STARTING INSTALLATION

WARNINGS AND SAFETY CODES

⚠️ DANGER
IF YOU SMELL GAS:
1. Shut off the gas to the appliance.
2. Extinguish any open flame.
3. Open cover.
4. If odor continues, keep away from the appliance, and immediately call your gas supplier or fire department.

⚠️ WARNING
1. Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
2. A propane cylinder not connected for use shall not be stored in the vicinity of this or any other appliance.

ONLY TO BE USED OUTDOORS

CODE AND SUPPLY REQUIREMENTS: This appliance must be installed in accordance with local codes and ordinances, or, in the absence of local codes, with either the latest National Fuel Gas Code (ANSI Z223.1/NFPA 54), and Natural Gas and Propane Storage and Handling Installation Code (CSA-B149.1).

This appliance and its individual shutoff valves must be disconnected from the gas supply piping system when testing the system at pressures in excess of ½ psig (3.5 kPa).

This appliance must be isolated from the gas supply piping system by closing its individual manual shutoff valves during any pressure testing of the gas supply system at pressures up to and including ½ psig (3.5 kPa).

Certified to: ANSI Z21.58
CSA 1.6

All electrical outlets in the vicinity of the appliance must be properly grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70, or the Canadian Electrical Code, CSA C22.1, whichever is applicable.

Keep all electrical supply cords and fuel supply hoses away from any heated surface.

Robert H. Peterson Co. • 14724 East Proctor Avenue • City of Industry, CA 91746
**DANGER:**

SI VOUS SENTEZ LE GAZ :
1. Coupez l’admission de gaz de l’appareil.
2. Éteignez toute flamme nue.
3. Ouvrez le couvercle.
4. Si l’odeur persiste, éloignez-vous de l’appareil et appelez immédiatement le fournisseur de gaz ou le service d’incendie.

**AVERTISSEMENT:**

1. Ne stockez pas ou n’employez pas l’essence ou d’autres vapeurs et liquides inflammables à proximité de ceci ou d’aucun autre appareil.
2. Un cylindre de propane non relié pour l’usage ne sera pas stocké à proximité de ceci ou d’aucun autre appareil.

**À UTILISER UNIQUEMENT À L’EXTÉRIEUR**

**CONDITIONS DE CODE ET D’APPROVISIONNEMENT:**

Ce gril doit être installé selon des codes et des ordonnances locaux, ou, en l’absence des codes locaux, avec l’un ou l’autre le plus défunt Code national de gaz de carburant (norme ANSI Z223.1/NFPA 54), et Stockage de gaz naturel et de propane et manipulation du code d’installation (CSA-B149.1).

Cet appareil et ses différents robinets d’isolement doivent être démontés du gaz-fournissent le système sifflant en examinant le système aux pressions au-dessus du ½ psig (kPa 3.5).

Cet appareil doit être isolé dans gaz-fournissent le système sifflant par fermeture que ses différents robinets d’isolement manuels pendant tous les essais sous pression du gaz-fournissent le système aux pressions jusques y compris le ½ psig (kPa 3.5).

- Ce gril est pour utilisation à l’extérieur seulement. Si l’appareil est entreposé à l’intérieur, enlever les bouteilles et les laisser à l’extérieur.
- Ne pas ranger le gril immédiatement après l’avoir utilisé, le laisser refroidir avant de le déplacer ou de la ranger. Le non respect de cette mesure de sécurité pourrait entraîner un incendie causant des dommages à la propriété, des blessures ou la mort.
- Ne pas utiliser cet appareil sous une surface combustible.
- Ne pas utiliser cet appareil sous un auvent. Le non respect de cette mesure de sécurité pourrait entraîner un incendie ou des dommages matériels.
- Dégagement minimal entre les parois latérales et l’arrière de l’appareil et la construction combustible (45.7 cm à partir des parois latérales et 45.7 cm à partir de l’arrière).
- Le régulateur de pression de gaz prévu avec cet appareil de cuisson à gaz pour l’extérieur doit être utilisé. Ce régulateur est réglé pour une pression de sortie de 5 pouces de colonne de l’eau pour le gaz naturel, et 10 pouces pour le propane.
- LE RÉGULATEUR INCLUS D’APPAREILS EST ÉVALUÉ POUR LE MAXIMUM DE 1/2 (LIVRES PAR POUCE CARRÉ). SI VOTRE OFFRE DE GAZ EST 1/2 PLUS GRAND QUE (LIVRES PAR POUCE CARRÉ), UN RÉGULATEUR ADDITIONNEL DOIT ÊTRE INSTALLÉ AVANT LE GRIL. VOIR LA SECTION DE CONDITIONS D’OFFRE DE GAZ POUR LA PRESSION APPROPRIÉE D’OFFRE DE GAZ.

**AVIS D’INSTALLATEUR :** Laissez ces instructions avec le consommateur.

**AVIS DE CONSOMMATEUR :** Maintenez pour la future référence.

Toutes les sorties électriques à proximité du gril doivent être correctement fondues selon des codes locaux, ou en l’absence de local code, avec le code électrique national, ANSI/NFPA 70, ou le code électrique canadien, CSA C22.1, celui qui est applicable.

Maintenez tout électrique-fournissent des cordes et carburant-fournissent des tuyaux partis de n’importe quelle surface de chauffage.

- Ne couvrez jamais la surface entière de cuisine ou de gril de gauffreuses ou de casseroles. La surchauffe se produira et les brûleurs ne seront pas très performants quand la chaleur de combustion est enfermée au-dessous de la surface à cuire.
- Ne pulvérissez jamais l’eau sur une unité chaude de gaz, comme ceci peut endommager des composants de porcelaine ou de fer de fonte.
- Une fuite de GPL peut causer une incendie ou une explosion si enflammée entraînant des blessures corporelles graves ou la mort.
- Communiquez avec le fournisseur de GPL pour les réparations ou pour disposer de qules bouteille ou du GPL non utilisé.

Certifié à la norme: ANSI Z21.58
CSA 1.6

**INSTALLATEUR :** Laissez ces instructions avec le consommateur.

**CONSOMMATEUR :** Maintenez pour la future référence.
1. The outdoor appliance and surrounding area MUST remain clear of flammable substances such as gasoline, yard debris, wood, etc. Maintain a minimum horizontal clearance of 18" (in all directions) from combustible materials/items.

2. Do not block the 1" front air inlet along the bottom of the control panel. See the COMBUSTION AIR AND COOLING AIRFLOW section under INSTALLATION REQUIREMENTS for details.

3. This unit must be installed so that the required vent openings and surrounding area of the enclosure remain clear and free at all times. See the ENCLOSURE/VENTILATION REQUIREMENTS section for details.

4. When using propane gas: the propane cylinder, regulator, and rubber hose must be in a location not subject to temperatures above 125° F (51° C).

5. Do not operate the burner with the cover in place.

6. The flames on the burner(s) burn evenly along the ceramic grid surface with a steady flame (mostly blue). See SEARING STATION FLAME PATTERN section. If burner flames are not normal, check and clean the orifice and burner tubes for insects and insect nests. A clogged tube can lead to a fire beneath the unit. A proper flame pattern will ensure safe operation and optimal performance.

7. The in-line gas valve or gas cylinder valve must always be shut OFF when the unit is not in use.

8. Whenever reconnecting any wires, apply a small amount of dielectric grease to the male connector, then make the connection. This will ensure conductivity and prevent moisture from affecting the contact.

9. Wear gloves and use extreme caution whenever installing and handling this product and its accessories as certain components have sharp edges that can cause personal injury.

CAUTION: FOR YOUR SAFETY, you must provide openings in the unit enclosure for replacement air and ventilation (in case of possible leakage from gas connections or propane cylinders). Failure to do so may result in a fire or explosion causing property damage, bodily injury, or death. See the ENCLOSURE / VENTILATION REQUIREMENTS section for details.

IMPORTANT
IN THE EVENT OF A GREASE FIRE, IMMEDIATELY SHUT OFF THE MAIN GAS VALVE TO THE UNIT. ALLOW THE FIRE TO EXTINGUISH ITSELF. KEEP AT A SAFE DISTANCE. A THOROUGH INSPECTION BY A QUALIFIED PROFESSIONAL SERVICE TECHNICIAN SHOULD BE CONDUCTED BEFORE FUTURE USE OF YOUR UNIT. THE SERVICE TECHNICIAN WILL CHECK THE SYSTEM FOR GAS LEAKS AND WILL CHECK ALL ELECTRICAL WIRING FOR DAMAGE. ALL GAS LEAKS AND WIRING MUST BE REPAIRED PRIOR TO FUTURE USE.

WARNING: NEVER cover more than 75% of the cooking surface with griddles or pans. Overheating will occur, and burners will not perform properly when combustion heat is trapped below the cooking surface.

The unit serial number is located inside the control panel and on the underside of the drip tray handle. It is recommended that the drip tray first be removed and cleaned / emptied of its contents, then turned over to view. The unit rating label is located on the inside of the control panel.

ELECTRICAL CONNECTIONS
A 120VAC (15 AMP minimum) GFCI GROUNDED 3-wire receptacle (not included) is required within the vicinity of the unit to provide power to it. The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.

- Observe the National Electric Code and all local codes.
- Verify proper polarity of the receptacle.
- If an extension cord is used, ensure it is a 3-wire GROUNDED cord that is rated for the power of the equipment, and is approved for outdoor use with a W-A marking. DO NOT use 2-prong adapters.
- DO NOT TAMPER WITH THE EXTENSION CORD OR THE UNIT POWER-SUPPLY CORD.
WARNING

This gas appliance, its enclosure, and the propane cylinder enclosure, if any, MUST be plumbed and vented in accordance with local building and safety codes and should be approved by local code enforcement officials. This appliance MUST be installed and operated according to the information below.

FAILURE TO PROPERLY VENT THE ENCLOSURE MAY RESULT IN A FIRE OR EXPLOSION CAUSING PROPERTY DAMAGE, BODILY INJURY, OR DEATH.

A leaking gas connection or valve unintentionally left open will create a hazard.

WHEN USING PROPANE GAS

• **Propane gas** (also known as L.P. gas) is heavier than air and will accumulate or pool in an inadequately vented enclosure or recessed area.

• If a pool of propane gas is ignited, an explosion will occur. Adequate venting at the floor level, or the lowest point where gas could accumulate, will eliminate this danger.

  Refer to the **ENCLOSURE / VENTILATION REQUIREMENTS** section.

  Observe all local codes.

• **DO NOT** store a spare propane-gas cylinder under or near the enclosure.

WHEN USING NATURAL GAS

• **Natural gas** is lighter than air and will accumulate at the top of an inadequately vented enclosure.

• If an accumulation of natural gas is ignited, an explosion will occur. Adequate venting at the top of the enclosure, or the highest point where gas could accumulate, will eliminate this danger.

  Refer to the **ENCLOSURE / VENTILATION REQUIREMENTS** section.

  Observe all local codes.

INSTALLATION SAFETY GUIDELINES

THIS UNIT MUST BE INSTALLED SO THAT THE REQUIRED VENT OPENINGS AND SURROUNDING AREA OF THE ENCLOSURE REMAIN CLEAR AND FREE AT ALL TIMES. See the **ENCLOSURE / VENTILATION REQUIREMENTS** section for details.

CAUTION: FOR YOUR SAFETY, you must provide openings in the enclosure for replacement air and ventilation (in case of possible leakage from gas connections or propane cylinders). Failure to do so may result in a fire or explosion causing property damage, bodily injury, or death. See the **ENCLOSURE / VENTILATION REQUIREMENTS** section for details.

The gas cylinder, regulator, and rubber hose must be in a location not subject to temperatures above 125° F (51° C).

IF A PROPANE CYLINDER IS INSTALLED INSIDE OF THE ENCLOSURE, THE GUIDELINES FOUND IN THE **ENCLOSURE / VENTILATION REQUIREMENTS** SECTION MUST BE FOLLOWED.

OPERATING THE UNIT SAFELY AND CORRECTLY

Every time you use the unit, **make sure that**:

1. The area around the enclosure is clear and free from combustible materials, gasoline and flammable vapors/liquids.

2. There is no blockage of the airflow through the vent openings located on the enclosure.

3. The hose is inspected (if applicable). See **SAFE USE & MAINTENANCE OF PROPANE-GAS CYLINDERS** section.

**DO NOT** store any combustible materials, gasoline, and any other flammable vapors/liquids in the vicinity of the unit. Provide adequate clearance for servicing and operation.
IMPORTANT POUR VOTRE SÛRETÉ

LISEZ ET SUIVEZ TOUS LES AVERTISSEMENTS ÉQUIPÉS DE VOTRE CYLINDRE DE GAZ DE PROPANE.

En actionnant cet appareil avec un cylindre de gaz de propane ON DOIT observer ces instructions et avertissements.

LE MANQUE DE FAIRE AINSI PEUT AVOIR COMME CONSÉQUENCE UNE INCENDIE OU UNE EXPLOSION SÉRIEUSE.

CYLINDRE ET CONDITIONS ET CARACTÉRISTIQUES DE CONNECTEUR

a. Les bouteilles, les vannes et les tuyaux de propane doivent être entretenus et inspectés avant chaque utilisation. Ils doivent être remplacés en cas de dommages visibles. Si le tuyau est coupé ou présente des signes d’abrasion ou d’usure, il doit être remplacé avant utilisation (voir e.).

b. Cette unité, lorsqu’elle est utilisée avec une bouteille, doit être connectée à une bouteille standard de gaz propane de 5 gallons (20 lb) équipée d’un dispositif anti-débordement répertorié. L’appareil est obligatoire sur toutes les bouteilles vendues depuis le 1er octobre 1998 afin d’empêcher tout remplissage excessif.

c. Les dimensions du cylindre doivent être d’environ 12 "(30,5 cm) de diamètre et 18" (45,7 cm) de hauteur. Les bouteilles doivent être construites et marquées conformément aux spécifications du ministère des Transports (DOT) pour les bouteilles à gaz LP ou à la norme relative aux bouteilles, sphères et tubes pour le transport des marchandises dangereuses et à la Commission, CAN / CSA-B339, selon le cas.

d. Le cylindre doit inclure un collier pour protéger la valve de cylindre et le circuit d’alimentation de cylindre doit être assuré le retrait de vapeur.

e. Le régulateur de pression et l’ensemble de tuyau utilisé doivent assortir les spécifications pour le type I par ANSI Z 21.58/CDA 1.6 (voir la figure. 6-1).

f. La valve de cylindre de gaz de propane doit être équipée d’un dispositif d’accouplement de raccordement de cylindre, décrit comme type I dans la norme définie dans le e. de paragraphe ci-dessus. Ce dispositif est généralement décrit comme coupleur de fil de point culminant.

g. Si votre cylindre de gaz de propane vient avec une prise de la poussière, placez le bouchon anti-poussière sur la sortie de valve de cylindre toutes les fois que le cylindre n’est pas en service.

OPÉRATION DE COUPLEUR

Pour relier le regulator/hose à l’ajustage de précision de valve de cylindre de gaz de propane: Serrez l’écrou de main sur le régulateur au-dessus de l’ajustage de précision de fil de point culminant sur la valve de cylindre. Tournez l’écrou de main dans le sens des aiguilles d’une montre pour engager les fils et pour serrer jusqu’à ce que douillettement. L’utilisation des pinces ou de la clé ne devrait pas être nécessaire. Seulement le propane marqué par cylindres doit être employé.

Pour débrancher: Tournez l’écrou de main dans le sens contraire des aiguilles d’une montre jusqu’à isolé (fig. 6-1).

Important:

Avant d’employer le unité, et ensuite chaque fois que le cylindre est enlevé et rattaché, examinez tous les raccordements pour déceler les fuites. Arrêtez les valves de unité et ouvrez la valve principale de cylindre, puis vérifiez les raccordements avec de l’eau savonneux. Réparez toutes les fuites avant d’allumer le unité.

ATTENTION: Tournez toujours la valve principale de cylindre de propane au loin après chaque utilisation, et avant de déplacer le unité et le cylindre, ou débrancher l’accouplement. Cette valve doit rester fermée et le cylindre a débranché alors que l’appareil n’est pas en service, quoique l’écoulement de gaz soit arrêté par un dispositif de sûreté quand le coupleur est débranché.

Inspectez soigneusement l’ensemble de tuyau chaque fois avant que le gaz soit allumé. Un tuyau fissuré ou effiloché doit être immédiatement remplacé.

Si l’appareil est stocké à l’intérieur, le cylindre doit être disconnected et a enlevé. Des cylindres Disconnected doivent être stockés dehors, hors de la portée des enfants, avec les prises de valve filetées étroitement installées, et ne doivent pas être stockés dans un bâtiment, le garage, ou n’importe quel autre secteur inclus.

POUR VOTRE SÛRETÉ

a. Ne stockez pas un cylindre de gaz disponible de propane dessous ou ne vous approchez pas de cet appareil.

b. Ne remplissez jamais cylindre au delà de 80 pour cent de plein.

c. SI L’INFORMATION DANS “A” ET “B” N’EST PAS SUIVIE EXACTEMENT, UN FEU CAUSANT LA MORT OU DES DOMMAGES SERIEUX PEUT SE PRODUIRE.

Fig. 6-1 type coupleur de fil de point culminant d’I

Pour les besoins de ventilation et d’enceinte au propane, Voir la section ENCLOSURE / VENTILATION REQUIREMENTS.
SAFETY USE & MAINTENANCE OF PROPANE GAS CYLINDERS

IMPORTANT FOR YOUR SAFETY
READ AND FOLLOW ALL WARNINGS PROVIDED WITH THE PROPANE-GAS CYLINDER.
When operating this appliance with a propane-gas cylinder, these instructions and warnings MUST be observed.
FAILURE TO DO SO MAY RESULT IN A SERIOUS FIRE OR EXPLOSION.

CYLINDER/CONNECTOR REQUIREMENTS

a. Propane-gas cylinders, valves, and hoses must be maintained in good condition and inspected before each use of appliance. They must be replaced if there is any visible damage. If hose is cut or shows excessive abrasion or wear, it must be replaced before using appliance (see e.).

b. This unit, when used with a cylinder, should be connected to a standard 5-gallon (20 lb.) propane-gas cylinder equipped with a listed overfilling prevention device. The device has been required on all cylinders sold since October 1, 1998, to prevent overfilling.

c. Cylinder dimensions should be approximately 12" (30.5 cm) in diameter and 18" (45.7 cm) high. Cylinders must be constructed and marked in accordance with the U.S. Department of Transportation (D.O.T.) Specifications for LP-Gas Cylinders, or the Standard for Cylinders, Spheres, and Tubes for Transportation of Dangerous Goods and Commission, CAN/CSA-B339, as applicable.

d. The cylinder used must include a collar to protect the cylinder valve, and the cylinder supply system must be arranged for vapor withdrawal.

e. The pressure regulator and hose assembly used must match the specification for Type I by ANSI Z 21.58/CGA 1.6 (see Fig. 7-1).

f. The propane-gas cylinder valve must be equipped with a cylinder connection device, described as Type I in the standard defined in paragraph e. above. This device is commonly described as an Acme thread coupler.

g. If the propane-gas cylinder comes with a dust plug, place the dust cap on the cylinder valve outlet whenever the cylinder is not in use.

COUPLER OPERATION

To connect the regulator/hose assembly to the propane-gas cylinder valve fitting: Press the hand nut on the regulator over the Acme thread fitting on the cylinder valve. Turn the hand nut clockwise to engage the threads and tighten until snug.

The use of pliers or a wrench should not be necessary. Only cylinders marked “propane” may be used.

To disconnect: Turn the hand nut counterclockwise until detached (Fig. 7-1).

Important: Before using the unit, and after each time the cylinder is removed and reattached, check the hose for wear (see a.) and check all connections for leaks. Turn off the unit valves and open the main cylinder valve, then check connections with soapy water. Repair any leaks before lighting the unit.

CAUTION: Always turn the propane cylinder main valve off after each use, and before moving the unit and cylinder or disconnecting the coupling. This valve must remain closed and the cylinder disconnected while the appliance is not in use, even though the gas flow is stopped by a safety feature when the coupler is disconnected.

Carefully inspect the hose assembly each time before the gas is turned on. A cracked or frayed hose must be replaced immediately.

If the appliance is stored indoors, the cylinder must be disconnected and removed. Disconnected cylinders must be stored outdoors, out of the reach of children, with threaded valve plugs tightly installed, and must not be stored in a building, garage, or any other enclosed area.

FOR YOUR SAFETY

a. DO NOT store a spare propane-gas cylinder under or near this appliance.

b. NEVER fill the cylinder beyond 80-percent full.

c. IF THE INFORMATION IN a. AND b. IS NOT FOLLOWED EXACTLY, A FIRE CAUSING DEATH OR SERIOUS INJURY MAY OCCUR.

Fig. 7-1 Type I Acme thread coupler

For propane ventilation and enclosure requirements, see the ENCLOSURE / VENTILATION REQUIREMENTS section.
Fire Magic GFRC islands are available. They meet all enclosure and ventilation requirements. For requirements regarding custom-built enclosures, see below.

**VENTILATION (ALL ENCLOSURES)**

For All Piping Systems and All Gas Types:
(Natural Gas, Household Propane, L.P. Cylinder)

FOR YOUR SAFETY, you must provide the openings listed below for replacement air and ventilation of the enclosure (in case of possible leakage from gas connections or L.P. cylinders). Failure to do so may result in a fire or explosion causing property damage, bodily injury, or death.

One side of the enclosure shall be left completely open to the outside; OR 4 (minimum) ventilation openings **MUST** be created (reference Fig. 8-1 and Fig. 8-2):

- Each opening must have a minimum of 10 sq. in. of free area. The openings must be equally sized. (Total of 40 sq. in. free area.)
- Two openings must be in the side walls of the enclosure, at the top level, and spaced at a minimum of 90 degrees. The openings must begin 1" or less below the countertop level and end no more than 5" below the countertop level.
- Two openings must be in the side walls of the enclosure, at the floor level, and spaced at a minimum of 90 degrees. The openings must begin 1" or less above the floor level and end no more than 5" above the floor level.
- The openings **must remain unobstructed:**
  - The clearance between the openings and any items outside of the enclosure is a minimum of 6". The clearance between the openings and any items within the enclosure is a minimum of 2". See Fig. 8-2.

When an L.P. cylinder is used in the enclosure, additional requirements exist, see the following section.

It is acceptable to use RHP venting panels (PN 5510-01). Contact your dealer.

**KEEP THE REQUIRED VENT OPENINGS AND SURROUNDING AREA OF THE ENCLOSURE CLEAR AND FREE AT ALL TIMES.**

**WARNING:** Ventilation openings in side walls shall not communicate directly with other enclosures of the outdoor cooking gas appliance.
ENCLOSURE

The countertop MUST be constructed of non-combustible materials. The enclosure can be constructed of combustible or non-combustible materials.

For combustible enclosures, an insulating liner is always required (see Table 1).

WHEN A PROPANE (L.P.) CYLINDER IS USED IN THE ENCLOSURE

When a propane (L.P.) cylinder is installed inside of the enclosure, the additional guidelines below MUST be followed. FAILURE TO DO SO MAY CAUSE DAMAGE TO YOUR UNIT AND/OR PERSONAL INJURY. Refer to Fig. 9-1 and 9-2.

- Only a C.S.A. listed stainless steel connector can be connected to the unit.
- The regulator/hose assembly coming from the cylinder can only be connected to the above mentioned flex connector. DO NOT connect the regulator/hose assembly directly to the unit. An adapter will be required.
- A non-combustible heatshield must be installed to protect the regulator/hose assembly and cylinder valve.
- The cylinder must rest at least 2" above the ground.
- An additional vent opening is recommended in the access door near the cylinder and at the gas connection level (minimum 10 sq. in. of free area).

RHP offers an “access door with tank tray and louvers” which includes a heatshield that rests directly above the L.P. cylinder, a tray, and louvers to meet the cylinder install requirements. The door is shown in Fig. 9-3. Contact your dealer for ordering information.

Fig. 9-1 L.P cylinder orientation

Fig. 9-2 Additional ventilation opening for L.P. cylinder

Fig. 9-3 Optional door w/ tank tray & louvers
Installation must be performed by a qualified professional service technician.

This unit is designed for outdoor use only. DO NOT use this unit inside a building, garage, or enclosed area. DO NOT use this unit in or on a recreational vehicle or boat.

OVERHEAD CONSTRUCTION AND EXHAUST HOOD REQUIREMENTS

A minimum 5 foot clearance is required between the countertop and the overhead construction.

When installed under combustible overhead construction, the area above the cooking surface of the unit **must** be covered with an exhaust hood. The exhaust hood provides the protection for the combustible overhead construction. See exhaust hood information below and Fig. 10-1.

**Important:** DO NOT use this appliance under unprotected combustible overhead construction.

When installed under overhead non-combustible construction, an exhaust hood is highly recommended; see exhaust hood information below and Fig. 10-1.

**Exhaust Hood**

When using an exhaust hood, the area above the cooking surface of the power burner must be covered with a hood larger than the cooking area of the power burner, and with a minimum of 1200 CFM (cubic feet per minute) rated exhaust fan for proper outdoor application.
REAR WALL CLEARANCES

For the minimum clearances between the unit and rear walls, your setup must fall within one (or more) of the following:

A. Clearance between unit and strictly non-combustible rear wall
   (i.e. brick wall, see Fig. 11-1)
   • The unit must have a minimum clearance of 4" from the non-combustible rear wall.
   (To allow for proper ventilation and prevent dangerous overheating.)

B. Clearance between unit and a protected combustible rear wall
   (i.e. a non-combustible wall in front of a combustible wall to serve as a barrier. This can be accomplished by brick, or a metal stud finished with non-combustible substrate, see Fig. 11-2)
   • The unit must have a minimum clearance of 14" from the protected combustible rear wall.
   (The 4" non-combustible material plus an additional 10" clearance between the unit and protected rear wall.)

C. Clearance between unit and combustible rear wall
   • The unit must have a minimum clearance of 18" from the combustible rear wall (see Fig. 11-3).

BACKSPLASH CLEARANCE (if applicable)

If a non-combustible backsplash exists, it must have a minimum of a 4" clearance from the rear of the unit (to allow for proper ventilation and prevent dangerous overheating). See Fig. 11-4.

Important: This 4" backsplash clearance must first be met prior to any non-combustible walls beginning behind it.

SIDE WALL / CORNER WALL CLEARANCEs
(if applicable)

The unit must have a minimum clearance of 18" from any side walls (to account for variables in airflow that could affect performance). See Fig. 11-5.
CONTROL PANEL CLEARANCES

- The control panel **MUST** have a minimum side clearance of 6" from any obstructions/side walls. See Fig. 12-1. (To allow for access to light switch and control panel removal.)
- The control panel **MUST** remain removable for servicing (see CONTROL PANEL REMOVAL section). Any adjacent countertops must not obstruct the panel from being removed.

COMBUSTION AIR AND COOLING AIRFLOW

Proper airflow (front-to-back, Fig. 12-2) **MUST** be maintained for the unit to perform as it was designed. If airflow is blocked, overheating and poor combustion will result. Do not block the 1" front air inlet along the bottom of the control panel.

GAS-SUPPLY PLUMBING REQUIREMENTS

For natural gas or a household propane system, rigid 1/2" or 3/4" black steel pipe or local code-approved pipe is required to conduct the gas supply to the unit. Contact your local gas supplier. Connect this pipe to the required C.S.A.-approved stainless-steel flex connector (attached). An NPT adapter has been provided for 1/2" pipe. **DO NOT use a rubber hose within the unit enclosure.** Apply only joint compounds that are resistant to all gasses on all NPT pipe fittings **except flare fittings.** Make sure to tighten all fittings securely.

**Note:** If 1/2" pipe is used with **natural gas,** it should be no longer than 20'.

**Important:** A shut-off valve (not included) in the gas line is required. It provides for safety when the unit is not in use and for convenient maintenance and repair. It must be installed within 6 feet of the unit. If it is located within the enclosure, it must be easily accessible. Use a pipe joint compound resistant to all gasses on all male fittings except flare fittings.

**GAS SUPPLY AND MANIFOLD PRESSURES:**

For **natural gas** - normal 7" water column (w.c.), minimum 5", maximum 10 1/2". For **propane gas** - normal 11" w.c., minimum 10", maximum 13".
ELECTRICAL SAFETY

• To protect against electric shock, do not immerse cord or plugs in water or other liquid.
• Unplug from the outlet when not in use and before cleaning. Allow to cool before putting on or taking off parts.
• Do not operate any outdoor cooking gas appliance with a damaged cord, plug, or after the appliance malfunctions or has been damaged in any manner. Contact the manufacturer for repair.
• Do not let the cord hang over the edge of a table or touch hot surfaces.
• Do not use an outdoor cooking gas appliance for purposes other than intended.
• When connecting, first connect plug to the outdoor cooking gas appliance then plug appliance into the outlet.
• Use only a properly wired and inspected 120VAC (15 AMP minimum) Ground Fault Circuit Interrupter (GFCI) GROUNDED 3-wire receptacle with this outdoor cooking gas appliance.
• The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.
• Never remove the grounding plug or use with an adapter of 2 prongs.
• Use only extension cords with a 3 prong grounding plug, rated for the power of the equipment, and approved for outdoor use with a W-A marking.
• The provisions of the National Electric Code as well as any local codes must be observed when installing the product.

† Includes any substrate at front wall of enclosure (in the area the rear of the control panel is to sit flush against). See SUBSTRATE section on next page.

‡ Only applicable for non-combustible enclosures that have countertops with an overhang (see illustration and section below).

**COUNTERTOP OVERHANG**

The control panel is designed to sit flush against the enclosure front wall. If the enclosure countertop extends beyond the front wall, creating a countertop overhang, it must be cut flush with the front wall for the width of the control panel or a gap will be created exposing the forward portions of the left and right side fire walls of the unit. See illustrations above.

**ENCLOSURE VENTILATION**

FOR YOUR SAFETY, you must provide openings in the enclosure for replacement air and ventilation (in case of possible leakage from gas connections or propane cylinders). Failure to do so may result in a fire or explosion causing property damage, bodily injury, or death. See the ENCLOSURE / VENTILATION REQUIREMENTS section for details.
MODEL SPECIFICATIONS (cont.)

RECOMMENDED OFFSET INSTALL

It is highly recommended to build the enclosure for the power burner 6”-12” LOWER than your countertop (see Fig. 16-1). This will ensure a safer environment when using tall cooking pots like a turkey fryer, which can hold 40 lbs of hot oil.

Consult Table 3 for power burner cutout dimensions. See Fig. 16-1 below for countertop offset installation information.

Important: The surrounding non-combustible walls must have a minimum clearance of 2” beyond the power burner hangers to allow for proper installation, airflow, and ventilation.

If using an insulating liner:

- Consult liner instructions for enclosure cutout dimensions and installation.
- Ensure the 2” clearance for the surrounding non-combustible walls is calculated beyond the insulating liner hangers.

SUBSTRATE

When adding any substrate to the enclosure front wall (including tiles, stone, etc.), consider the following:

Substrate Behind Control Panel

Substrate + countertop "front to back" cutout must equate to Dim. C (see previous page) when the substrate sits flush behind the control panel.

Substrate Alongside Control Panel

Any additional substrate alongside the control panel does not need to be considered in Dim. C (see previous page), however a 1/4" clearance on each side (same as overhang) and below is required.

Fig. 16-1

Fig. 16-2

Fig. 16-3
Note: In addition, a wire diagram for this unit can be found affixed to the inside of the control panel.
Replacement parts can be ordered from your local Fire Magic Grill dealer.

* Not shown
‡ Optional / purchased separately
It is not required to remove the control panel or knobs to install this unit.

DO NOT lift the unit from the control panel when installing.

COUNTER PREPARATION
Consult Table 3 for non-combustible enclosure cut-out dimensions. A RHP insulating liner must be used if any supporting construction is combustible. Consult the instructions that come with the liner for dimensions and additional installation information before beginning the installation.

This power burner must be supported by the stainless-steel hanger extending from the upper portion of the frame. The hanger rests on the left, right, and back of the countertop.

The control panel is designed to sit flush against the enclosure front wall (see Fig. 19-1). If the non-combustible enclosure countertop extends beyond the front wall, creating a countertop overhang (see Fig. 19-2), it must be cut flush with the front wall for the width of the control panel or a gap will be created exposing the forward portions of the left and right side fire walls of the unit. See the MODEL SPECIFICATIONS section.

CONNECT THE GAS SUPPLY
For propane cylinders:
For connecting a propane unit to a portable propane tank, read the safety warnings and follow the instructions in the section SAFE USE AND MAINTENANCE OF PROPANE GAS CYLINDERS.

Note: When a propane cylinder is installed inside of the enclosure, the guidelines found in the ENCLOSURE / VENTILATION REQUIREMENTS section MUST be followed.

For household propane or natural gas units:
CAUTION: Use only C.S.A. listed stainless-steel flex connectors within the enclosure.

WARNING
A rubber or plastic connector will rupture or leak, resulting in an explosion or serious injury if used inside the appliance enclosure.

1. Locate the attached flex connector (found underneath the unit) and route it to the gas supply stub.
2. Turn OFF the gas supply at the source.
3. A shut-off valve is required within 6 feet of the unit. If shut-off valve is installed in-line:
   • Install the supplied flare-to-NPT adapter to the gas supply (NPT) using a pipe joint compound resistant to all gasses (see Fig. 19-3, A). Tighten securely.
   • Connect the flex connector to the adapter (see Fig. 19-3, A). Tighten securely.
If shut-off valve is connected to end of gas supply stub:
   • Connect the flex connector to the shut-off valve (flare) (see Fig. 19-3, B). Tighten securely.
4. Turn burner control knobs to the \textbf{OFF} position. Turn the gas supply on. Then carefully check all gas connections for leaks with a brush and half-soap/half-water solution before lighting. \textbf{NEVER USE A MATCH OR OPEN FLAME TO TEST FOR LEAKS.}

5. Close the shut-off valve.

**POWER SUPPLY & WIRE HARNESS CONNECTIONS**

Follow the text/illustrations below and on one of the following pages for proper wire connections. The wire harnesses are labeled to further assist with connections.

**CAUTION:** IMPROPERLY CONNECTED WIRES WILL CAUSE DAMAGE TO THE UNIT AND MAY RESULT IN PROPERTY DAMAGE AND/OR PERSONAL INJURY.

The unit comes with a 6’ wire extension to retrieve power from a separately purchased Echelon Diamond grill. Echelon Diamond grills are equipped with power supply boxes, which can supply power to the power burner (see ECHELON GRILL POWER SUPPLY BOX section below).

Alternatively; an optional power supply box may be ordered and installed to independently power this unit (see following INDEPENDENT POWER SUPPLY section). Contact your dealer for ordering information.

**Important:** If installing with an Echelon Griddle, the Power Burner must be powered with an independent power supply. A griddle power supply cannot be used with Echelon side cookers.

**TO INSTALL USING AN ECHELON GRILL POWER SUPPLY BOX:**

1. Locate the power supply box that is connected to the Echelon Grill and ensure the power cord is disconnected, if connected (see Fig. 20-1, A).

2. Disconnect the grill wire harness extension connectors from the power supply connectors (see Fig. 20-1, B).

---

**CAUTION:** IMPROPERLY CONNECTED WIRES WILL CAUSE DAMAGE TO THE UNIT AND MAY RESULT IN PROPERTY DAMAGE AND/OR PERSONAL INJURY.

The unit comes with a 6’ wire extension to retrieve power from a separately purchased Echelon Diamond grill. Echelon Diamond grills are equipped with power supply boxes, which can supply power to the power burner (see ECHELON GRILL POWER SUPPLY BOX section below).

Alternatively; an optional power supply box may be ordered and installed to independently power this unit (see following INDEPENDENT POWER SUPPLY section). Contact your dealer for ordering information.

**Important:** If installing with an Echelon Griddle, the Power Burner must be powered with an independent power supply. A griddle power supply cannot be used with Echelon side cookers.

**TO INSTALL USING AN ECHELON GRILL POWER SUPPLY BOX:**

1. Locate the power supply box that is connected to the Echelon Grill and ensure the power cord is disconnected, if connected (see Fig. 20-1, A).

2. Disconnect the grill wire harness extension connectors from the power supply connectors (see Fig. 20-1, B).
3A. Single side cooker connections:

- Locate the “Y” end of the wire harness extension that is included with the power burner and make connections C and D (see Fig. 21-1, C & D).
- Connect the opposite end of the wire harness extension to the power burner connectors (see Fig. 21-1, E).
- Proceed to the POWER SUPPLY INSTALLATION section.

3B. Multiple side cooker connections (grill left install):

- Locate the FIRST wire harness extension that is included with the FIRST side cooker and make connections C and D (see Fig. 21-2, C & D).
- Locate the SECOND wire harness extension that is included with the SECOND side cooker and make connections E, F, and G (see Fig. 21-2, E, F, & G).
- Proceed to the POWER SUPPLY INSTALLATION section.
3C. Multiple side cooker connections (grill center install):

- Locate the FIRST wire harness extension that is included with the FIRST side cooker and make connections C and D (see Fig. 22-1, C & D).
- Locate the SECOND wire harness extension that is included with the SECOND side cooker and make connections E, F, and G (see Fig. 22-1, E, F, & G).
- Proceed to the POWER SUPPLY INSTALLATION section.
TO INSTALL USING AN INDEPENDENT POWER SUPPLY BOX (NOT INCLUDED):

1. Locate the "Y" end of the wire harness extension that is included with the power burner and connect the compatible end to the power supply connectors (see Fig. 23-1, A).

2. Connect the opposite end of the wire harness extension to the power burner connectors (see Fig. 23-1, B).

For multiple side cooker connections to one independent power supply, reference the previous pages to assist with connections. (Omit the grill wire harness connection.)

POWER SUPPLY INSTALLATION

CAUTION: IMPROPERLY CONNECTED WIRES WILL CAUSE DAMAGE TO THE GRILL AND/OR POWER BURNER AND MAY RESULT IN PROPERTY DAMAGE AND/OR PERSONAL INJURY.

To install the power supply box:

1. It MUST be located at least 12 inches below the bottom of the grill and/or power burner (see Fig. 23-2).

2. The wire extension that exits from the control panel MUST be routed directly downward. This will prevent overheating. DO NOT route the wire extension below the grill and/or power burner (see Fig. 23-2).

Note: For enclosures with a solid area beneath the grill and/or power burner, a cutout must be made near the wire extension to allow for the above requirement. If an insulating liner is installed with the grill and/or power burner, route the wire down through the nearest hole possible.

3. Mount the power supply box to the inside of the enclosure using appropriate hardware for your enclosure.

WARNING: DO NOT block the vent holes found on the box.

4. Connect the cord coming from the power supply to a 120VAC (15 AMP minimum) GFCI GROUNDED 3-wire receptacle (see Fig. 23-2). The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.

WARNING: Electrical Grounding Instructions - This appliance is equipped with a three-pronged (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.
SLIDE UNIT INTO ENCLOSURE
Slide the unit into place. Do not pinch, kink, or damage the gas connector line.

Note: Each side of the unit has a tab just behind the control panel. These tabs prevent the control panel from moving inward. If the tabs interfere with the unit sliding in (see Fig. 24-1), use pliers to bend them inward so that they clear the enclosure sides. Leave the tabs slightly out to ensure they still keep the control panel from moving inward (see Fig. 24-2).

INSTALL THE COOKING GRID
Carefully place the cooking grid onto the front and rear grid rests of the unit (see Fig. 24-3).

Note: When using a wok for stir fry cooking, remove the cooking grid and the wok will be supported by the collimator.

INSTALL THE POWER BURNER LID
Carefully place the lid over the cooking grid area of the unit. It is recommended to keep the lid on when the unit is not in use. Do not operate the unit with the lid in place.

Fig. 24-1 Tab may interfere when sliding in unit
Fig. 24-2 Tab slightly bent in for clearance
Stainless steel cooking grid shown here
Fig. 24-3 Install cooking grid
* The light switch is push button operated, and is located on the right side of the control panel. It controls the power to the lighted knobs.

**Fig. 25-2** Double Sideburner controls
BEFORE INITIAL USE
Ensure that:
• the unit has been properly installed and leak tested by a qualified professional service technician and as instructed in this manual.
• you have read and understand all of the information in this manual.

BEFORE EACH USE
Ensure that:
• you smell around the appliance area for gas. If you smell gas (and all control knobs are in the OFF position), immediately shut off the gas supply and contact a qualified professional service technician or the gas supplier for inspection.
• the required vent openings and surrounding area of the unit enclosure are clear at all times.
• the cooking area and drip tray are clean, and the drip tray is properly installed.
• you inspect all piping and hoses for damage, cuts, wear, and tear. Replace any damaged components prior to use.

OPERATION
• The unit becomes HOT during use.
• NEVER touch any part of the cooking area or surrounding hot surfaces with bare hands. Use long-handled insulated BBQ tools and wear an insulated glove / oven mitt.
• Always keep your face and body as far from the unit as possible during use. Avoid wearing loose-fitting clothing as they could ignite.
• NEVER leave the unit unattended during use.
• NEVER cover more than 75% of the cooking grid surface with griddles or pans to prevent overheating.
• After each use, turn the control knob(s) to the OFF position and turn off the gas supply to the unit.

After reading and understanding all bullets above, follow these steps to light and use your unit:
1. Light the unit per the LIGHTING INSTRUCTIONS section.
2. Turn the control knob(s) to the HI-LIGHT position, place cookware over the burner and allow the cookware to preheat as needed until desired cooking temperature is reached.
3. Place your ingredients on the cookware and cook as desired. Monitor the flames and temperature, and adjust the heat setting if necessary.
4. See the sections below and the following pages for all other information regarding use.

WIND CONSIDERATIONS
Proper airflow (front-to-back, Fig. 26-1) MUST be maintained for the unit to perform as it was designed. See the INSTALLATION REQUIREMENTS section for details.
When using the unit in windy conditions, the wind can disrupt the airflow and cause overheating.

AFTER EACH USE
5. Clean off any food particles and grease from the stainless steel surfaces once the unit has completely cooled.
6. Cover the unit.

Note: For additional cleaning, refer to the SERVICING AND CLEANING section.
LIGHTING (IGNITION) INSTRUCTIONS

Read all instructions before lighting, and follow these instructions each time you light the unit.

ELECTRONIC LIGHTING

Note: This unit must be connected to 120VAC power for electronic lighting.

1. Remove the power burner lid.
2. Turn all gas control knob(s) to their OFF position(s).
3. Turn on the gas at its source.

Note: DO NOT turn on more than one valve at a time for either electronic or manual lighting.

4. Depress the desired control knob for 5 seconds. Ensure the igniter is glowing (between the inner and outer burner), then, while pressing turn the knob counterclockwise to the HI LIGHT position. Once the burner lights, release the knob.

CAUTION: If a burner does not light within five (5) seconds of turning on the control knob, depress the knob and turn it to the OFF position. WAIT FIVE (5) MINUTES before repeating step 4. If you smell gas, follow the instructions on the cover of this manual. If the burners still do not light after several attempts, refer to the instructions for manual lighting.

5. Repeat step 4 for each additional burner to be lit.

MANUAL LIGHTING

CAUTION: Always wait five minutes for gas to clear after any unsuccessful lighting attempt.

WARNING: DO NOT put hand directly above the burner when lighting but off to the side as shown (Fig. 27-2).

1. Follow steps 1 through 3 (left).

2a. Insert either a burning long-barrel butane lighter, a burning long-stem match, or a burning match held by a wire extension holder through the cooking grids to the desired burner to be lit (Fig. 27-2). With the flame still next to the burner, depress the corresponding control knob (outer burner-right knob, inner burner-left knob), and while pressing turn it counterclockwise to the HI LIGHT position. Remove the lighter or match when the burner lights, and release the control knob.

2b. To manually light the second burner, after step 2a has been followed, depress the corresponding control knob, and while pressing turn it counterclockwise to the HI LIGHT position. The second burner will light from the flame of the already lit burner. Release the control knob.

3. If the burner does not light within five (5) seconds of turning the control knob, IMMEDIATELY turn the burner control knob to the OFF position. WAIT FIVE MINUTES before repeating steps 2 and 3 of the MANUAL LIGHTING INSTRUCTIONS.

SHUTTING OFF THE UNIT

To shut off the unit, depress each valve control knob and while pressing turn it clockwise to the OFF position. Always close the valve from the gas supply after each use of the unit.

WHEN USING A PORTABLE PROPANE TANK

Propane tanks are equipped with a safety shutdown device that may cause low or no gas pressure/flame at the burners if operating and lighting instructions are not followed exactly (See important note in the TROUBLESHOOTING section for more details.)

For your convenience and safety; when the control knob is turned to the on position, the gas flow indicator will change from blue to red. (Red indicates gas flow.) See Fig. 27-1.
ÉCLAIRAGE ÉLECTRONIQUE

Note: Le unité doit être relié à la puissance 120VAC pour l'éclairage électronique.

1. Retirez le couvercle du brûleur électrique.
2. Tournez tous les boutons de commande de gaz à leurs positions de repos.
3. Allumez le gaz à sa source.

Note: N’ouvrez pas plus d’une valve à la fois pour l’éclairage électronique ou manuel.

4. Appuyez sur le bouton de commande souhaité pendant 5 secondes. Assurez-vous que l’allumeur brûle (entre le brûleur intérieur et extérieur), puis tout en appuyant, tournez le bouton dans le sens inverse des aiguilles d’une montre jusqu’à la position HI LIGHT. Une fois le brûleur allumé, relâchez le bouton.

ATTENTION: Si un brûleur ne s’allume pas dans cinq (5) secondes d’allumer le bouton de commande, enfoncez le bouton et tournez-le à la position de repos. ATTENDEZ CINQ (5) MINUTES avant de répéter l’étape 4. Si vous sentez le gaz, suivez les instructions sur la couverture de ce manuel. Si les brûleurs ne s’allument toujours pas après que plusieurs tentatives, se rapportent aux instructions pour l’éclairage manuel.

5. Répétez l’étape 4 pour que chaque brûleur additionnel soit Lit.

ÉCLAIRAGE MANUEL

ATTENTION: Attendez toujours cinq minutes le gaz pour se dégager après que n’importe quelle tentative non réussie d’éclairage.

AVERTISSEMENT: Ne mettez pas la main directement au-dessus du brûleur en s’allumant mais au loin au côté comme montré (Fig. 28-2).

1. Suivez les étapes 1 à 3 (à gauche).

2a. Insérez un allumeur brûlant de butane de long-baril, une allumette brûlante de long-tige, ou une allumette brûlante tenue par un support de prolongation de fil par les grilles à cuire au brûleur désiré à allumer (Fig. 28-2). Avec la flamme toujours à côté du brûleur, diminuez le bouton de commande de correspondance (bouton externe de droite de brûleur, brûleur intérieur laissés le bouton), et tout en pressant le tour il dans le sens contraire des aiguilles d’une montre dans la position LÉGÈRE de HI. Enlevez l’allumeur ou assortissez quand le brûleur s’allume, et libérez le bouton de commande.

2b. Pour allumer manuellement le deuxième brûleur, après que l’étape 2a ait été suivie, diminuez le bouton de commande de correspondance, et tout en pressant le tour il dans le sens contraire des aiguilles d’une montre dans la position LÉGÈRE de HI. Le deuxième brûleur s’allumera de la flamme du brûleur déjà allumé. Libérez le bouton de commande.

3. Si le brûleur ne se allume pas dans les cinq (5) secondes de tourner le bouton de commande, tournez immédiatement le bouton de commande de brûleur à la position de repos. ATTENDEZ CINQ MINUTES avant de répéter les étapes 2 et 3 des INSTRUCTIONS MANUELLES d’ÉCLAIRAGE.

ARRÊT DU UNITÉ

Pour couper le unité, diminuez chaque bouton de commande de valve et tout en pressant tour il dans le sens des aiguilles d’une montre à la position de repos.

Fermez toujours la valve de la fourniture de gaz après chaque utilisation du unité.

En employant un réservoir de propane portatif

Des réservoirs de propane sont équipés d’un dispositif d’arrêt de sûreté qui peut ne pas causer le bas ou aucunes pression de gaz/flamme aux brûleurs si le fonctionnement et l’allumage des instructions ne sont pas suivis exactement (voir la note importante dans la section de dépannage pour plus de détails.)
Your power burner requires regular cleaning and maintenance. Refer to these instructions for details. Performing these procedures will ensure proper operation, appearance, and safety.

WARNINGS
- Prior to servicing or cleaning make sure the unit is completely cool, the control knobs are turned to the OFF position, the gas supply is shut off, the light switch is off, and the power supply is disconnected (as applicable and unless otherwise stated).
- Wear appropriate gloves and safety glasses during any servicing or cleaning.
- DO NOT spray any cleaner or liquids on the unit when hot.
- The unit MUST be cleaned regularly to prevent grease build-up and other food deposits. A clean and well maintained unit prevents the risk of grease build-up and grease fires.
- Verify proper operation after servicing or deep cleaning.
- See INSTALLATION, OPERATION, AND SAFETY INFORMATION section for additional related information.

CLEANING YOUR POWER BURNER

Before Each Use
1. Inspect and clean the exterior surfaces of the unit: With a cool power burner, clean any dust, grease, splatter, or spills as needed with a damp clean cloth.

After Each Use
1. Clean the interior protection plate surface and cooking grid: With a cool power burner, clean any dust, grease, splatter, or spills as needed with a damp clean cloth. If needed, use a grill brush to clean the cooking grid of any residue.
2. Check and clean your drip tray: When the unit is cool, carefully remove the drip tray and dispose of contents appropriately. Clean tray in a soapy water solution if needed. For tough deposits, a copper pad can be used. Rinse and dry completely. Insert the tray back into the power burner.
3. Cover your power burner: Once the unit is dry and cool, place the power burner lid and cover your power burner with a Fire Magic protective cover (not included).

Twice A Year (or as needed) - Deep Clean
1. Interior of power burner: In addition to cleaning the interior protection plate surface, cooking grid, and drip tray, a deep clean of the interior, burner, and all components MUST be performed twice a year (or as needed depending on use). Follow the steps below.
   a. With a cool unit, remove the power burner lid, cooking grid, interior protection plate, flame collimator, and burner assembly. Clean all components in a soapy water solution, rinse, dry, and set aside. For tough deposits and the burner, a copper pad can be used.
   Note: Refer to the parts list, INTERIOR PROTECTION PLATE REMOVAL, FLAME COLLIMATOR REMOVAL, and BURNER REMOVAL sections as needed.
   Important: The burner ports and carry-over slot MUST be kept clean to ensure proper ignition and operation.
   b. Interior liner: use a stainless steel putty knife to remove any grease and food deposits. Then use a grill cleaner and a copper pad to scrub the liner. Fire Magic grill cleaner is recommended. Follow instructions provided with the grill cleaner. Wipe down the entire surface of the liner with a wet, clean, heavy-duty rag. Remove all cleaner.
   c. Re-install all components removed during this process.
2. Exterior of power burner (lid and control panel)
   Porcelainized (black) surfaces: Use a non-corrosive oven/grill cleaner (or a soapy water solution) and a cloth to remove grease and dirt. Rinse and dry completely.
   Stainless steel surfaces: With a cool unit, use a grill cleaner (or a soapy water solution) and a clean cloth to remove grease and dirt from the lid and control panel. For tough deposits, a copper pad can be used. Always wipe with the grain. Rinse and dry completely. Then follow up with a stainless steel cleaner and a clean cloth.
   If this routine cleaning is not performed, the stainless steel may become dull and develop surface rust (due to use and atmospheric conditions). If left uncleaned, significant damage and pitting may occur.
   Important: DO NOT use steel wool, any other metal tools, or any other cleaners/chemicals to clean the exterior other than recommended above. Such items promote rust.
   Note: Due to the nature of stainless steel, temperatures produced by the cooking process will cause discoloration. This can be reduced by routine cleaning.
SERVICING AND CLEANING (cont.)

For Environments High In Salt, Chloride, Or Other Corrosive Chemicals

When this power burner is installed in a corrosive environment such as near the ocean (salt air), poolside (chlorine and/or pool chemicals) or any other location with exposure to high salt/chloride content or corrosive chemicals/solutions, it will be more susceptible to corrosion and MUST be maintained/cleaned more frequently.

- **DO NOT** store any corrosive chemicals (chlorine, hydrochloric acid, fertilizer, etc.) near your stainless steel unit.
- **DO NOT** allow any corrosive materials (masonry dust, debris, etc.) to settle on your stainless steel unit.
- These environments, chemicals, and materials may cause the 304 stainless steel to develop surface rust and consequently pitting. Under these conditions the unit exterior MUST be cleaned at least monthly. Inspect your power burner often and clean accordingly.

Protecting Your Power Burner

In addition to the supplied power burner lid (placed first), an optional Fire Magic protective cover will protect your power burner when not in use. Install the cover on a cool and dry unit. **DO NOT** cover a damp power burner. During high humidity or after rainy conditions, remove the cover to dry trapped moisture if present. (If the cover is installed over a damp unit it can cause surface rust.)

Ensure that the INSIDE of the cover is **DRY** before putting it back on the power burner.
CONTROL PANEL REMOVAL

1. Turn the control knob(s) to the OFF position and turn off the gas supply to the unit.

2. Turn off the light switch and disconnect the power supply from the power source.

3. Pull the control knob(s) from the stems and set aside.

4. Slowly lift the lighted bezels to clear the valve stems, and let rest as shown in Fig. 31-1.

5. Remove the drip tray.

6. Using a Phillips screwdriver, unscrew and remove the control panel fastener screws and washers (located on the left and right front face of the control panel). Retain the screws for later re-installation.

7. Carefully open the control panel by lifting and pulling the control panel from the frame.

   **Important:** When opening, take caution to not damage any wiring.

8. If wire disconnections are required, reference the wire diagram in the MODEL SPECIFICATIONS section in this instruction manual or the wire diagram label affixed to the inside of the control panel.

   **Note:** Secure any disconnected wires (coming from the inside of the unit) to prevent them from falling in.

   **Note:** Whenever reconnecting any wires, apply a small amount of dielectric grease to the male connector, then make the connection. This will ensure conductivity and prevent moisture from affecting the contact.

   **Important:** During reinstallation; prior to opening the gas shut-off valve, be sure the control knob(s) are in the OFF position.
INTERIOR PROTECTION PLATE REMOVAL

1. Remove the cooking grid.
2. Lift up the interior protection plate from the left side, then lift up from the right side (see Fig. 32-1, A and B).

Note: If needed, insert a screwdriver into the provided cutouts to assist in detaching the plate.

3. While lifting the plate upward, flex the collimator inward to completely free the protection plate (see Fig. 32-1, C).
4. Reverse these steps to install the protection plate.

FLAME COLLIMATOR REMOVAL

1. Remove the cooking grid and interior protection plate (see section above).
2. Squeeze the collimator to detach the rear tab from the rear liner as shown in Fig. 32-2, A, and lift up the rear portion of the collimator.
3. Detach the collimator from the front collimator support and completely remove the collimator as shown in Fig. 32-2, B.
4. Reverse these steps to install the collimator.

BURNER REMOVAL

1. Remove the cooking grid, interior protection plate, and flame collimator (see sections above).
2. To completely free the burner, the igniter assembly will need to first be detached from the burner.
3. Carefully lift the burner upward and outward, pulling it away from the orifices.

Note: Be sure not to lose the air shutters or air shutter springs which may become detached when the burner is removed.

4. To re-install, position the air shutter spring and air shutter over the orifice holder fitting, between the burner and the heat shield, in the order and position shown in Fig. 32-3. Do for both burner necks.
5. Carefully place the burner stud back in the locator hole so that the brass orifices and orifice holder fittings project into the burner gas inlets. When the burner stud fits in the locator hole, the orifices are in alignment.

Note: It is critical to the continued safe functioning of the burners that the orifices are centered and completely inside the burner gas inlets.

6. Reattach the igniter assembly (if detached).
CONVERT GAS TYPE / CHECK BURNER ORIFICES

CAUTION: Make sure the unit is at a safe temperature and is isolated from gas and electrical supplies before beginning.

For your safety, exercise caution, and make sure you have adequate hand protection, such as gloves, when handling metal parts.

Apply Conversion Label

This unit comes from the factory configured for one type of gas as marked on the label behind the control panel.

When the unit is converted, the label for the new gas (included at original shipping) MUST be filled out and applied next to the existing label mentioned above.

Convert Regulator

The gas regulator, located behind the control panel (see CONTROL PANEL REMOVAL section), must be set for the type of gas used to fuel the unit. To check the regulator setting, remove the cap in the center of the regulator (Fig. 33-1, A). Holding the cap vertical (see Fig. 33-2, B), the letters at the bottom of the plastic stalk indicate the gas type for which the regulator is currently configured.

If the text on the bottom of the regulator stalk does not match the gas type connected to the unit, remove the stalk from the cap, invert, and replace into center of cap. Replace cap on the regulator, screwing down until snug.

Procedure continued on following page
**Convert Gas Orifices**

When converting the unit to a different gas type, burner orifices must be replaced with the corresponding orifice for the new gas. See MODEL SPECIFICATIONS, Table 1 to determine the proper orifice size for the burners.

**Important:** It is critical to the operation of each burner that its orifice be fully inserted into the center of its orifice opening.

**WARNING**

HAZARDOUS OVERHEATING WILL OCCUR IF A NATURAL-GAS ORIFICE IS USED WITH PROPANE GAS.

1. Remove the lid and cooking grid. Remove the interior protection plate and the flame collimator. See the INTERIOR PROTECTION PLATE REMOVAL and FLAME COLLIMATOR REMOVAL sections.
2. Remove the burner. See the BURNER REMOVAL section for details.
3. The orifice size is stamped on each orifice face (see Fig. 34-1).
4. If orifice changes are necessary, replace the orifices with the correct-sizes for both the inner and outer burner necks.
5. Replace the burner.
6. Replace the flame collimator, interior protection plate, cooking grid, and lid.

**Connect To New Gas Supply**

Plumb the unit as appropriate for the new gas supply. (Additional components may be needed for your specific setup.) **Be sure to leak test at all connections.**
AIR SHUTTER ADJUSTMENT

Power burner air shutter(s) are located on the necks of the power burner as shown in Fig. 35-1.

CAUTION: DO NOT handle a hot burner without adequate hand protection.

To adjust the air shutters:

1. Remove the cooking grid. Remove the interior protection plate and the flame collimator. See the INTERIOR PROTECTION PLATE REMOVAL and FLAME COLLIMATOR REMOVAL sections.

2. Remove the burner. See the BURNER REMOVAL section for details.

3. Turn the shutter to the desired opening size and replace the burner to test the effect on the flame (see LIGHTING INSTRUCTIONS).

Burner flames should burn evenly (mostly blue). A proper flame pattern will ensure safe operation and optimal performance. Reference the MAINTENANCE AND SAFETY INFORMATION section.

4. Replace the flame collimator, interior protection plate, and cooking grid.
Please use this page to record any information about your unit that you may want to have at hand.
## TROUBLESHOOTING

If you have trouble with the unit, please use this list to identify the problem. By trying one or more of the solutions to the possible cause, you should be able to solve the problem. If this list does not cover your present problem, or if you have other technical difficulties with the unit, please contact your local dealer.

<td><strong>Burner goes out on LOW</strong></td>
<td>1. Valve &quot;Low&quot; setting needs adjustment</td>
<td>1. Light burner on HIGH, immediately turn to LOW setting. Remove knob from valve and using a small flat screwdriver, slowly turn the adjustment screw in the stem, a little at a time (30° to 45°), in either direction, until the flame is approximately 1/4&quot; in height from burner ports.</td>
</tr>
</tbody>
</table>

* Important: Propane tanks are equipped with a safety shutdown device that may cause low or no gas/flame at the burners if operating and lighting instructions are not followed exactly. **If you suspect the propane tank safety shutoff is in effect:** 1) Shut off all burner valves. 2) Shut off tank valve. 3) Open and close a main burner valve. 4) Open tank valve. 5) Follow the LIGHTING INSTRUCTIONS. Lighting instructions are located in your owner's manual and printed on the unit's metal drip tray. If the problem persists, continue troubleshooting, or contact your local dealer or R. H. Peterson for assistance.
Robert H. Peterson Co. ("RHP") warrants your Fire Magic® grill to be free from defects in material and workmanship.

Fire Magic® cast stainless-steel gas burners, Choice stainless steel burners, cooking grids, and barbecue housings are warranted as long as you own your Fire Magic® grill — LIFETIME. (Except as described below.)

Fire Magic® valves, manifold assemblies, inner liners, porcelain housings (including ovens and barbecue faces), and backburner assemblies (except ignition parts) are warranted for FIFTEEN (15) YEARS.

Fire Magic® Electric Grills and their stainless steel cooking grids and stainless steel housings are warranted for TEN (10) YEARS.

Fire Magic® infra-red burners, flavor grids, and charcoal stainless steel grills are warranted for FIVE (5) YEARS; except for the charcoal pan, charcoal grid, thermometer, and ash catch tray, which are warranted for ONE (1) YEAR.

Fire Magic® sideburners, exterior Glass Fiber Reinforced Concrete (GFRC) grill island systems, and all other grill components (except ignition systems and electronic parts) are warranted for THREE (3) YEARS.

Fire Magic® grill and grille ignition systems (excluding batteries), electronic components (including lights and thermometers), and grill accessories are warranted for ONE (1) YEAR.

A COPY OF YOUR SALES SLIP FOR PROOF OF PURCHASE IS REQUIRED

This warranty applies to the original purchaser for products which are installed in the United States or Canada and which are operated and maintained as intended for single family residential usage. This warranty is valid only with proof of purchase, commence on the date of purchase, and terminates (both as to original and any replacement products) on the anniversary date of the original purchase of the product per the above schedules.

This warranty covers defects in material and workmanship. This warranty does not cover parts which become defective as a result of negligence, misuse, use not in compliance with the Installation and Owner's Manual, accidental damage, improper handling, improper storage, improper installation, lack of required routine maintenance (as specified in the Installation and Owner's Manual), electrical damage, local gas impurities or failure to protect against combustibles. Product must be installed (and gas must be connected) as specified in the Installation and Owner's Manual by a qualified professional installer. Modifications to products which are not specifically authorized will void this warranty. Accessories, parts, valves, remotes, etc. when used must be Peterson products or this warranty is void. Warrantied items will be repaired or replaced at Peterson's sole discretion. This warranty does not apply to rust, corrosion, oxidation, or discoloration unless the affected part becomes inoperable.

This warranty does not cover labor or labor related charges, except as provided by separate specific written programs from the Peterson Co. All repair work must be performed by a qualified professional service person and requires prior approval of Peterson.

Peterson may require the defective product or part to be returned to the factory to determine the cause of failure. Peterson will pay freight charges if the product or part is determined to be defective. This warranty does not cover breakage in shipment from our (Independent) distributor to its customer if the damage is determined to have occurred during that shipment.

This warranty specifically excludes liability for indirect, incidental, or consequential damages. Some states and provinces do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion may not apply to you. This warranty gives you specified legal rights, and you may have other rights that vary from state to state or province.

For additional information regarding this warranty, or to place a warranty claim, contact the R. H. Peterson dealer where the product was purchased.

When contacting your Peterson dealer or the R. H. Peterson Co., please provide the following information:
- Your name, address, telephone number, e-mail
- Sales receipt showing where purchased and date purchased
- Model number, serial number of product, date code
- Relevant information: installer, additions, repairs, when defect was first noted
