Built-in Outdoor
Gas Grill Quick Start Guide

1-Safety
CAUTION: WHEN INSTALLING UNIT, BE AWARE OF GRILL ENCLOSURE / VENTILATION REQUIREMENTS; YOU MUST VENT UNIT IN ACCORDANCE WITH YOUR OWNER’S MANUAL. FAILURE TO DO SO MAY RESULT IN A FIRE OR EXPLOSION CAUSING PROPERTY DAMAGE, BODILY INJURY, OR DEATH.

This must be installed in accordance with local codes and ordinances, or in the absence of local codes, with either the latest National Fuel Gas Code (ANSI Z223.1/NFPA 54), and Natural Gas and Propane Storage and Handling Installation Code (CSA-B149.1).

This appliance and its individual shutoff valves must be disconnected from the gas-supply piping system when testing the system at pressures in excess of ½ psig. This appliance must be isolated from the gas-supply piping system by closing its dedicated manual shutoff valve during any pressure testing of the gas-supply system at pressures up to and including ½ psig.

This unit is designed for outdoor use only. DO NOT use this unit inside a building, garage, or enclosed area (see paragraph below). DO NOT use this unit in or on a recreational vehicle or boat.

A minimum 5 foot clearance is required between the countertop and the overhead construction. When installed under combustible overhead construction, the area above the cooking surface of the grill must be covered with an exhaust hood. The exhaust hood provides the protection for the combustible overhead construction. DO NOT use this appliance under unprotected combustible overhead construction. When installed under overhead non-combustible construction, an exhaust hood is highly recommended. When using an exhaust hood, the area above the cooking surface of the grill must be covered with a hood larger than the cooking area of the grill, and with a minimum of 1200 CFM (cubic feet per minute) for proper outdoor application.

CAUTION: TO PREVENT DANGEROUS OVERHEATING, THE REAR OF THE UNIT MUST HAVE A MINIMUM CLEARANCE OF 4" FROM ANY BACKSPLASH/NON-COMBUSTIBLE WALL.

IMPORTANT: If installing this unit in a COMBUSTIBLE enclosure, the correct RHP insulating liner must be used. Consult the liner instructions for complete details.

DO NOT use this appliance under unprotected combustible overhead construction.

2-Unpacking
Carefully unpack the unit, removing all packing material and protective film (including the clear film on the drip tray). Verify that all parts have arrived undamaged by consulting the parts list in the owner's manual. Remove foam packed hardware from oven area. (See Fig. 2-1.)

Consult the parts list in the owner's manual. If any parts are missing or damaged, immediately contact the Fire Magic dealer before beginning installation.

3-Installation
Location
Refer to the INSTALLATION REQUIREMENTS section of your grill owner's manual for complete details.

CAUTION: Wind blowing into or across the rear oven lid vent (Fig. 3-2) can cause poor performance and/or dangerous overheating. Orient the grill so that the prevailing wind blows toward the front of the grill (Fig. 3-1).

CAUTION: To prevent dangerous overheating, the rear of the unit must have a minimum clearance of 4" from any backslash/non-combustible wall.

Grill Placement
Slide the unit into the enclosure cutout. The control panel must be flush with the enclosure face as shown in Fig. 3-3. The front support adjustment bolts MUST be used to provide support to the hangers. See Fig. 3-4.

Proper grill airflow (front-to-back) must be maintained as shown in Fig. 3-5. Do not block the 1” front air inlet. It is not necessary to remove the control panel or knobs for installation.

Connect Gas Supply
These quick start instructions assume a natural gas or household propane configured unit. See main instructions for propane cylinder units.

Note: This section is only an overview of installation to the gas supply. Refer to the grill owner's manual for complete grill installation details.

Turn OFF the gas supply at the source. Route the flex connector (attached to the grill) under the left side of the grill to the timer box area. Connect the flex connector coming from the grill to the 1/2” flare adapter labeled OUT. See Fig. 3-6. Connect gas source to IN: Connect a flex connector (not included) to the 1/2” flare to-NPT adapter (included) at the grill to the gas supply stub (see Fig. 3-6). Turn all burner control knobs to the OFF position. Turn the gas supply on. Then carefully check all gas connections for leaks with a brush and half-soap/half-water solution before lighting. NEVER USE A MATCH OR OPEN FLAME TO TEST FOR LEAKS.

IMPORTANT: You must read the installation and owner’s manual provided with the grill.
INSTALLER: Leave these instructions with consumer. CONSUMER: Retain for future reference.
4-Grill Setup

Parts Placement Checklist
Install the following items according to their position and orientation in Fig. 4-1:
Flavor grids, cooking grids, grid locking channel, control knob locks, and drip tray.
Leave pre-installed burners in place to maintain proper alignment.

Flavor Grids
Place the flavor grids directly onto the studs on the burners. For 540i and 650i models, the slightly larger grids are designed to be placed over the outside burners, and the slightly smaller grid over the inner burner.

Cooking Grids
Carefully place the rear of a cooking grid between the locking ridge of the rear wall. Then, carefully place the front of the cooking grids onto the front grid rest of the grill.

Grid Locking Channel
To secure the cooking grids, first remove the control panel, attach the locking channel to the rear of the control panel, then reinstall control panel. See the grill owner's manual for complete details.

Control knob Locks
Remove the rubber grip from the control knob. Insert the included hex key through the small hole located on the side of the knob and fully tighten the screw. Replace the rubber grip. Repeat this process for the remaining knobs.

Drip Tray
Place a liner into the drip tray and insert the drip tray assembly into the bottom front of the control panel opening.

IMPORTANT: See your grill owner's manual for complete installation details.

5-Test
To set the timer, turn the dial clockwise to the desired time to shut off. The dial is marked in 3 twenty minute increments (any position in between is an estimate of that set time). The timer dial will auto rotate (counter-clockwise) and will shut off the gas supply when the dial reaches OFF (i.e. the time is completed).

Note: DO NOT turn on more than one valve at a time for either spark ignition or manual lighting.
1. Open the oven hood.
2. Turn all gas control knob(s) to their OFF position(s).
3. Turn on the gas at its source.
4. Set timer control knob to the desired cooking time.
5. Depress the desired control knob, and while pressing turn it counterclockwise to the HI LIGHT position. Once the burner lights, release the knob.
Note: Turning the knob will create a “click” sound and ignite the burner. If there is no ignition, immediately turn to OFF position and repeat sequence quickly until the burner ignites.

CAUTION: If a burner does not light within five (5) seconds of turning on the control knob, depress the knob and turn it to the OFF position, WAIT FIVE (5) MINUTES before repeating step 5. If you smell gas, follow the instructions on the cover of the grill owner's manual. If the burners still do not light after several attempts, refer to the grill owner's manual for manual lighting.
6. Repeat step 5 for each additional burner to be lit.

6-Propane and Natural Gas Safety
FOR PROPANE CONFIGURATIONS; READ ALL SAFETY INSTRUCTIONS AND WARNINGS REGARDING THE USE OF PROPANE GAS FOUND IN YOUR OWNER’S MANUAL. FOR NATURAL GAS READ ALL SAFETY INSTRUCTIONS AND WARNINGS FOUND IN YOUR OWNER’S MANUAL.

7-Routine Maintenance
Your grill must be serviced and maintained properly to ensure optimal performance, appearance, and safety. Clean your grill before and after each use. Additionally, a deep clean of the entire grill and all its components be performed twice a year (or as needed depending on use). See owner’s manual for details.
