IMPORTANT: READ THESE INSTRUCTIONS CAREFULLY BEFORE STARTING INSTALLATION OR USE.

DANGER:
If you smell gas:
1. Shut off the gas to the appliance.
2. Extinguish any open flame.
3. Open lid.
4. If odor continues, keep away from the appliance and immediately call your gas supplier or the fire department.

WARNING:
1. Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.
2. An LP cylinder not connected for use shall not be stored in the vicinity of this or any other appliance.

CODE AND SUPPLY REQUIREMENTS: This grill must be installed in accordance with local codes and ordinances, or, in the absence of local codes, with the latest National Fuel Gas Code (ANSI Z223.1/NFPA 54), or Natural Gas and Propane Storage and Handling Installation Code (CSA-B149.1).

This appliance and its dedicated manual shutoff valve must be disconnected from the gas-supply piping system when testing the system at pressures in excess of ½ psig (3.5 kPa).

This appliance must be isolated from the gas-supply piping system by closing its dedicated manual shutoff valve during any pressure testing of the gas-supply system at pressures up to and including ½ psig (3.5 kPa).

All electrical outlets in the vicinity of the grill must be properly grounded in accordance with local codes, or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70, or the Canadian Electrical Code, CSA C22.1, whichever is applicable.

Keep all electrical-supply cords and fuel-supply hoses away from any heated surface.

Proper operation of your grill requires prompt and periodic maintenance. See the SERVICING AND CLEANING section for details.

Certified to: ANSI Z21.58
CSA 1.6

American Outdoor Grill • PO Box 4053 • La Puente, CA 91747
DANGER:
SI VOUS SENTEZ LE GAZ :
1. Coupez le gaz à l’appareil.
2. Éteignez-vous n’importe quelle flamme nue.
3. Ouvrez le couvercle.
4. Si l’odeur continue, gardez loin de l’appareil et appelez immédiatement votre département de fournisseur ou de feu de gaz.

AVERTISSEMENT:
1. Ne stockez pas ou n’employez pas l’essence ou d’autres vapeurs et liquides inflammables à proximité de ceci ou d’aucun autre appareil.
2. Un cylindre de propane non relié pour l’usage ne sera pas stocké à proximité de ceci ou d’aucun autre appareil.

CONDITIONS DE CODE ET D’APPROVISIONNEMENT:
Ce gril doit être installé selon des codes et des ordonnances locaux, ou, en l’absence des codes locaux, avec l’un ou l’autre le plus défunt Code national de gaz de carburant (norme ANSI Z223.1/NFPA 54), et Stockage de gaz naturel et de propane et manipulation du code d’installation (CSA-B149.1).

Cet appareil et ses différents robinets d’isolement doivent être démontés du gaz-fournissent le système sifflant en examinant le système aux pressions au-dessus du ½ psig (kPa 3.5).

Cet appareil doit être isolé dans gaz-fournissent le système sifflant par fermeture que ses différents robinets d’isolement manuels pendant tous les essais sous pression du gaz-fournissent le système aux pressions jusques et y compris le ½ psig (kPa 3.5).
- Ce gril est pour utilisation à l’extérieur seulement. Si l’appareil est entreposé à l’intérieur, enlever les bouteilles et les laisser à l’extérieur.
- Ne pas ranger le gril immédiatement après l’avoir utilisé. Le laisser refroidir avant de le déplacer ou de la ranger. Le non respect de cette mesure de sécurité pourrait entraîner un incendie causant des dommages à la propriété, des blessures ou la mort.
- Ne pas utiliser cet appareil sous une surface combustible.
- Ne pas utiliser cet appareil sous un auvent. Le non respect de cette mesure de sécurité pourrait entraîner un incendie ou des blessures.
- Dégagement minimal entre les parois latérales et l’arrière de l’appareil et la construction combustible (45.7 cm à partir des parois latérales et 45.7 cm à partir de l’arrière).
- Le régulateur de pression de gaz prévu avec cet appareil de cuisson à gaz pour l’extérieur doit être utilisé. Ce régulateur est réglé pour une pression de sortie de 5 pouces de colonne de l’eau pour le gaz naturel, et 10 pouces pour le propane.
- LE RÉGULATEUR INCLUS D’APPAREILS EST ÉVALUÉ POUR LE MAXIMUM DE 1/2 (LIVRES PAR POUCE CARRÉ). SI VOTRE OFFRE DE GAZ EST 1/2 PLUS GRAND QUE (LIVRES PAR POUCE CARRÉ), UN RÉGULATEUR ADDITIONNEL DOIT ÊTRE INSTALLÉ AVANT LE GRIL. VOIR LA SECTION DE CONDITIONS D’OFFRE DE GAZ POUR LA PRESSION APPROPRIÉE D’OFFRE DE GAZ.
- Ne couvrez jamais la surface entière de cuisine ou de grille de gauffreuses ou de casseroles. La surchauffe se produira et les brûleurs ne seront pas très performants quand la chaleur de combustion est emprisonnée au-dessous de la surface à cuire.
- Ne pulvérisez jamais l’eau sur une unité chaude de gaz, comme ceci peut endommager des composants de porcelaine ou de fer de fonte.
- Une fuite de GPL peut causer une incendie ou une explosion si enflammée entraînant des blessures corporelles graves ou la mort.
- Communiquez avec le fournisseur de GPL pour les réparations ou pour disposer de quelles bouteille ou du GPL non utilisé.

Certifié à la norme: ANSI Z21.58 / CSA 1.6

INSTALLATEUR : Laissez ces instructions avec le consommateur. CONSUMMATEUR : Maintenez pour la future référence.

REV 4 - 1907081330 L-C2-439

3
1. The outdoor appliance and surrounding area MUST remain clear of flammable substances such as gasoline, yard debris, wood, etc. Maintain a minimum horizontal clearance of 18” (in all directions) from combustible materials/items.

2. Do not block the 1” front air inlet along the bottom of the control panel. See the COMBUSTION AIR AND COOLING AIRFLOW section under INSTALLATION REQUIREMENTS for details.

3. This unit must be installed so that the vent openings and surrounding area of the grill remain clear and free at all times. See the GAS SAFETY INFORMATION section.

4. When using propane gas: the propane cylinder, regulator, and rubber hose must be in a location not subject to temperatures above 125° F (51° C).

5. The back burner cover or IR burner cover (if equipped) must be removed before using the burner.

6. The flames on each burner burn evenly along the entire burner with a steady flame (mostly blue). If burner flames are not normal, check and clean the orifice and burner/venturi tubes for insects and insect nests. A clogged tube can lead to a fire beneath the unit. A proper flame pattern will ensure safe operation and optimal performance. Adjust the air shutter as needed (see AIR SHUTTER ADJUSTMENT section).

7. The in-line gas valve or gas cylinder valve must always be shut OFF when the unit is not in use.

8. The drip collector holes must be clear and unobstructed. Excessive grease deposits can result in a grease fire.

9. Whenever reconnecting any wires, apply a small amount of dielectric grease to the male connector, then make the connection. This will ensure conductivity and prevent moisture from affecting the contact.

10. Wear gloves and use extreme caution whenever installing and handling this product and its accessories as certain components have sharp edges that can cause personal injury.

IMPORTANT

IN THE EVENT OF A GREASE FIRE, IMMEDIATELY SHUT OFF THE MAIN GAS VALVE TO THE UNIT. KEEP THE LID OPEN AND ALLOW THE FIRE TO EXTINGUISH ITSELF. KEEP AT A SAFE DISTANCE. A THOROUGH INSPECTION BY A QUALIFIED PROFESSIONAL SERVICE TECHNICIAN SHOULD BE CONDUCTED BEFORE FUTURE USE OF YOUR UNIT. THE SERVICE TECHNICIAN WILL CHECK THE SYSTEM FOR GAS LEAKS AND WILL CHECK ALL ELECTRICAL WIRING FOR DAMAGE. ALL GAS LEAKS AND WIRING MUST BE REPAIRED PRIOR TO FUTURE USE.

WARNING: NEVER cover more than 75% of the cooking or grill surface with griddles or pans. Overheating will occur, and burners will not perform properly when combustion heat is trapped below the cooking surface.

The unit serial number tag can be found affixed to the grill body behind the control panel (on an aluminum tag) and on the underside of the drip tray handle (on a thermal label). It is recommended that the drip tray first be removed and cleaned / emptied of its contents, then turned over to view.

The unit rating label is located inside of the control panel.

ELECTRICAL CONNECTIONS

A 120VAC (15 AMP minimum) GFCI GROUNDED 3-wire receptacle (not included) is required within the vicinity of the unit to provide power to it. The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.

- Observe the National Electric Code and all local codes.
- Verify proper polarity of the receptacle.
- If an extension cord is used, ensure it is a 3-wire GROUNDED cord that is rated for the power of the equipment, and is approved for outdoor use with a W-A marking. DO NOT use 2-prong adapters.
- DO NOT TAMPER WITH THE EXTENSION CORD OR THE UNIT POWER-SUPPLY CORD.

Important: ONLY REPLACE THE INTERIOR OVEN LIGHTS WITH 12V / 10 WATT HALOGEN BULB(S).
WARNING

This appliance MUST be installed and operated according to the information below.

FAILURE TO PROPERLY VENT THE PROPANE TANK MAY RESULT IN A FIRE OR EXPLOSION CAUSING PROPERTY DAMAGE, BODILY INJURY, OR DEATH.

A leaking gas connection or valve unintentionally left open will create a hazard.

WHEN USING PROPANE GAS

- **Propane gas** (also known as L.P. gas) is heavier than air and will accumulate or pool in an inadequately vented area or recessed area.
- If a pool of **propane gas** is ignited, an explosion will occur. Adequate venting at the floor level of the propane tank eliminates this danger.
- DO NOT store a spare propane-gas cylinder near the unit.

WHEN USING NATURAL GAS

- **Natural gas** is lighter than air and will accumulate at the top of an inadequately vented area.
- If an accumulation of **natural gas** is ignited, an explosion will occur. Adequate venting will eliminate this danger.

INSTALLATION SAFETY GUIDELINES

THIS UNIT MUST BE INSTALLED SO THAT THE AREA AROUND THE UNIT AND PROPANE TANK REMAIN CLEAR AND FREE AT ALL TIMES.

The gas cylinder, regulator, and rubber hose must be in a location not subject to temperatures above 125° F (51° C).

IF A PROPANE CYLINDER IS INSTALLED, THE GUIDELINES FOUND IN THE SAFE USE & MAINTENANCE OF PROPANE GAS CYLINDERS SECTION MUST BE FOLLOWED.

OPERATING THE UNIT SAFELY AND CORRECTLY

Every time you use the unit, make sure that:

1. The area around the unit is clear and free from combustible materials, gasoline and flammable vapors/liquids.
2. There is no blockage of the airflow around the unit and propane tank.
3. The hose is inspected (if applicable). See SAFE USE & MAINTENANCE OF PROPANE-GAS CYLINDERS section.

DO NOT store any combustible materials, gasoline, and any other flammable vapors/liquids in the vicinity of the unit. Provide adequate clearance for servicing and operation.
UTILISATION SÛRE ET ENTRETIEN DES CYLINDRES DE GAZ DE PROPANE

IMPORTANT POUR VOTRE SÛRETÉ

LISEZ ET SUIVEZ TOUS LES AVERTISSEMENTS ÉQUIPÉS DE VOTRE CYLINDRE DE GAZ DE PROPANE.

En actionnant cet appareil avec un cylindre de gaz de propane ON DOIT observer ces instructions et avertissements.

LE MANQUE DE FAIRE AINSI PEUT AVOIR COMME CONSÉQUENCE UNE INCENDIE OU UNE EXPLOSION SÉRIEUSE.

CYLINDRE ET CONDITIONS ET

CARACTÉRISTIQUES DE CONNECTEUR

a. Des cylindres et les valves de gaz de propane doivent être maintenus en bon état et doivent être remplacés s'il y a des dommages évidents au cylindre ou à la valve.

b. Ce unité, une fois utilisé avec un cylindre, devrait être relié à un gallon de la norme 5 (20lb.) cylindre de gaz de propane équipé d'un OPD (remplissez au-dessus du niveau le dispositif d'empêchement). L'OPD a été exigé sur tous les cylindres vendus depuis octobre 1.1998 pour empêcher le remplissage excessif.

c. Les dimensions de cylindre devraient être approximativement 12"(30.5cm) de diamètre et 18" (45.7cm) hauts. Des cylindres doivent être construits et marqués selon les caractéristiques pour des cylindres de gaz de propane du département des ETATS-UNIS du transport (D.O.T) ou le niveau national du Canada, du CAN/CSA-B339, des cylindres, des sphères et des tubes pour le transport des marchandises dangereuses.

d. Le cylindre doit inclure un collier pour protéger la valve de cylindre et le circuit d'alimentation de cylindre doit être assuré le retrait de vapeur.

e. Le régulateur de pression et l'ensemble de tuyau utilisé doivent assortir les spécifications pour le type I par ANSI Z 21.58/CGA 1.6 (voir la figure. 6-1).

f. La valve de cylindre de gaz de propane doit être équipée d'un dispositif d'accouplement de raccordement de cylindre, décrit comme type I dans la norme définie dans le e. de paragraphe ci-dessus. Ce dispositif est généralement décrit comme coupleur rapide de fil de point culminant.

g. Si votre cylindre de gaz de propane vient avec une prise de poussière, placez le bouchon anti-poussière sur la sortie de valve de cylindre toutes les fois que le cylindre n'est pas en service.

OPÉRATION DE COUPLEUR RAPIDE

Pour relie le regulator/hose à l’ajustage de précision de valve de cylindre de gaz de propane: Serrez l’écrou de main sur le régulateur au-dessus de l’ajustage de précision de fil de point culminant sur la valve de cylindre. Tournez l’écrou de main dans le sens des aiguilles d’une montre pour engager les fils et pour serrer jusqu’à ce que douillement. L’utilisation des pinces ou de la clé ne devrait pas être nécessaire. Seulement le propane marqué par cylindres doit être employé.

Pour débrancher: Tournez l’écrou de main dans le sens contraire des aiguilles d’une montre jusqu’à isolé (fig. 6-1).

Important:

Avant d’employer le unité, et ensuite chaque fois que le cylindre est enlevé et rattaché, examinez tous les raccordements pour déceler les fuites. Arrêtez les valves de unité et ouvrez la valve principale de cylindre, puis vérifiez les raccordements avec d’eau savonneux. Réparez toutes les fuites avant d’allumer le unité.

ATTENTION: Tournez toujours la valve principale de cylindre de propane au loin après chaque utilisation, et avant de déplacer le unité et le cylindre, ou débrancher l’accouplement. Cette valve doit rester fermée et le cylindre a débranché alors que l’appareil n’est pas en service, quoique l’écoulement de gaz soit arrêté par un dispositif de sûreté quand le coupleur est débranché.

Inspectez soigneusement l’ensemble du tuyau chaque fois avant que le gaz soit allumé. Un tuyau fissuré ou effiloché doit être immédiatement remplacé. Si l’appareil est stocké à l’intérieur, le cylindre doit être disconnecté et a enlevé. Des cylindres Disconnecté doivent être stockés dehors, hors de la portée des enfants, avec les prises de valve filetées étroitement installées, et ne doivent pas être stockés dans un bâtiment, le garage, ou n’importe quel autre secteur inclus.

POUR VOTRE SÛRETÉ

a. Ne stockez pas un cylindre de gaz disponible de propane dessous ou ne vous approchez pas de cet appareil.

b. Ne remplissez jamais cylindre au delà de 80 pour cent de plein.

c. Si L’INFORMATION DANS “A” ET “B” N’EST PAS SUIVIE EXACTEMENT, UN FEU CAUSANT LA MORT OU DES DOMMAGES SÉRIEUX PEUT SE PRODUIRE.

Fig. 6-1 type coupleur rapide de fil de point culminant d’1
SAFE USE & MAINTENANCE OF PROPANE GAS CYLINDERS

IMPORTANT FOR YOUR SAFETY
READ AND FOLLOW ALL WARNINGS PROVIDED WITH THE PROPANE-GAS CYLINDER.
When operating this appliance with a propane-gas cylinder, these instructions and warnings MUST be observed.
FAILURE TO DO SO MAY RESULT IN A SERIOUS FIRE OR EXPLOSION.

CYLINDER/CONNECTOR REQUIREMENTS

a. Propane-gas cylinders, valves, and hoses must be maintained in good condition and must be replaced if there is visible damage to either the cylinder or valve. If the hose is cut or shows excessive abrasion or wear, it must be replaced before using the gas appliance (see e.).

b. This unit, when used with a cylinder, should be connected to a standard 5-gallon (20 lb.) propane-gas cylinder equipped with an OPD (Overfill Prevention Device). The OPD has been required on all cylinders sold since October 1, 1998, to prevent overfilling.

c. Cylinder dimensions should be approximately 12" (30.5 cm) in diameter and 18" (45.7 cm) high. Cylinders must be constructed and marked in accordance with the Specifications for Propane Gas Cylinders of the U.S. Department of Transportation (D.O.T.) or the National Standard of Canada, CAN/CSA-B339, Cylinders, Spheres, and Tubes for Transportation of Dangerous Goods.

d. The cylinder used must include a collar to protect the cylinder valve, and the cylinder supply system must be arranged for vapor withdrawal.

e. The pressure regulator and hose assembly used must match the specification for Type I by ANSI Z 21.58/CGA 1.6 (see Fig. 7-1).

f. The propane-gas cylinder valve must be equipped with a cylinder connection coupling device, described as Type I in the standard defined in paragraph e. above. This device is commonly described as an Acme thread quick coupler.

g. If the propane-gas cylinder comes with a dust plug, place the dust cap on the cylinder valve outlet whenever the cylinder is not in use.

QUICK COUPLER OPERATION

To connect the regulator/hose assembly to the propane-gas cylinder valve fitting: Press the hand nut on the regulator over the Acme thread fitting on the cylinder valve. Turn the hand nut clockwise to engage the threads and tighten until snug.

The use of pliers or a wrench should not be necessary. Only cylinders marked “propane” may be used.

To disconnect: Turn the hand nut counterclockwise until detached (Fig. 7-1).

Important: Before using the unit, and after each time the cylinder is removed and reattached, check the hose for wear (see a.) and check all connections for leaks. Turn off the unit valves and open the main cylinder valve, then check connections with soapy water. Repair any leaks before lighting the unit.

CAUTION: Always turn the propane cylinder main valve off after each use, and before moving the unit and cylinder or disconnecting the coupling. This valve must remain closed and the cylinder disconnected while the appliance is not in use, even though the gas flow is stopped by a safety feature when the coupler is disconnected.

Carefully inspect the hose assembly each time before the gas is turned on. A cracked or frayed hose must be replaced immediately.

If the appliance is stored indoors, the cylinder must be disconnected and removed. Disconnected cylinders must be stored outdoors, out of the reach of children, with threaded valve plugs tightly installed, and must not be stored in a building, garage, or any other enclosed area.

FOR YOUR SAFETY

a. DO NOT store a spare propane-gas cylinder under or near this appliance.

b. NEVER fill the cylinder beyond 80-percent full.

c. IF THE INFORMATION IN a. AND b. IS NOT FOLLOWED EXACTLY, A FIRE CAUSING DEATH OR SERIOUS INJURY MAY OCCUR.
Installation must be performed by a qualified professional service technician. This unit is designed for outdoor use only. DO NOT use this unit inside a building, garage, or enclosed area. DO NOT use this unit in or on a recreational vehicle or boat.

OVERHEAD CONSTRUCTION AND EXHAUST HOOD REQUIREMENTS

A minimum 5 foot clearance is required between the cooking surface and the overhead construction.

When installed under combustible overhead construction, the area above the cooking surface of the unit must be covered with an exhaust hood. The exhaust hood provides the protection for the combustible overhead construction. See exhaust hood information below and Fig. 8-1.

Important: DO NOT use this appliance under unprotected combustible overhead construction.

When installed under overhead non-combustible construction, an exhaust hood is highly recommended; see exhaust hood information below and Fig. 8-1.

Exhaust Hood

When using an exhaust hood, the area above the cooking surface of the grill must be covered with a hood larger than the cooking area of the grill, and with a minimum of 1200 CFM (cubic feet per minute) for proper outdoor application.

Fig. 8-1 Overhead requirements
SIDE AND REAR WALL CLEARANCES

For the minimum clearances between the unit and any side or rear walls, your setup must fall within one (or more) of the following:

A. Clearance between unit and strictly non-combustible wall

(i.e. brick wall, see Fig. 9-1)
- The unit must have a minimum of 4" right, left, and rear clearance from any non-combustible wall.
  (To allow for proper ventilation and prevent dangerous overheating.)

B. Clearance between unit and a protected combustible wall

(i.e. a non-combustible wall in front of a combustible wall to serve as a barrier. This can be accomplished by brick, or a metal stud finished with non-combustible substrate, see Fig. 9-2)
- The unit must have a minimum of 14" right, left, and rear clearance from the protected combustible wall.
  (The 4" non-combustible material plus an additional 10" clearance between the unit and protected wall.)

C. Clearance between unit and combustible wall

- The unit must have a minimum of 18" right, left, and rear clearance from any combustible wall (see Fig. 9-3).
The control panel **MUST** remain removable for servicing (see CONTROL PANEL REMOVAL section).

**COMBUSTION AIR AND COOLING AIRFLOW**

Proper airflow (front-to-back, Fig. 10-1) **MUST** be maintained for the unit to perform as it was designed. If airflow is blocked, overheating and poor combustion will result. Do not block the 1" front air inlet along the bottom of the control panel.

**CAUTION:** Wind blowing into or across the rear oven lid vent (Fig. 10-3) can cause poor performance and/or dangerous overheating. Install the grill so that the prevailing wind blows toward the front of the grill (Fig. 10-2). **A wind deflector is available for purchase to assist in proper airflow during windy conditions.** See Table 1 for model numbers. Follow the instructions included with the wind deflector for installation.

**GAS-SUPPLY PLUMBING REQUIREMENTS**

For natural gas or a household propane system, rigid 1/2" or 3/4" black steel pipe or local code-approved pipe is required to conduct the gas supply to the unit. Contact your local gas supplier. Connect this pipe to the C.S.A.-approved quick connect hose (attached). Apply only joint compounds that are resistant to all gasses to all male pipe fittings except flare fittings. Make sure to tighten every joint securely.

**Note:** If 1/2" pipe is used with natural gas, it should be no longer than 20'.

**Important:** A shut-off valve (not included) **in the gas line is required.** It provides for safety when the unit is not in use and for convenient maintenance and repair. It must be installed within 6 feet of the unit. Use a pipe joint compound resistant to all gasses on all male fittings except flare fittings.

**GAS SUPPLY AND MANIFOLD PRESSURES:**

For natural gas - normal 7" water column (w.c.), minimum 5", maximum 10 1/2". For propane gas - normal 11" w.c., minimum 10", maximum 13".
ELECTRICAL SAFETY

- To protect against electric shock, do not immerse cord or plugs in water or other liquid.
- Unplug from the outlet when not in use and before cleaning. Allow to cool before putting on or taking off parts.
- Do not operate any outdoor cooking gas appliance with a damaged cord, plug, or after the appliance malfunctions or has been damaged in any manner. Contact the manufacturer for repair.
- Do not let the cord hang over the edge of a table or touch hot surfaces.
- Do not use an outdoor cooking gas appliance for purposes other than intended.
- When connecting, first connect plug to the outdoor cooking gas appliance then plug appliance into the outlet.
- Use only a properly wired and inspected 120VAC (15 AMP minimum) Ground Fault Circuit Interrupter (GFCI) GROUNDED 3-wire receptacle with this outdoor cooking gas appliance.
- The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.
- Never remove the grounding plug or use with an adapter of 2 prongs.
- Use only extension cords with a 3 prong grounding plug, rated for the power of the equipment, and approved for outdoor use with a W-A marking.
- The provisions of the National Electric Code as well as any local codes must be observed when installing the product.

IMPORTANT

Your AOG barbecue, oven and backburner (if equipped) are fully pre-assembled and tested at the factory.

DO NOT attempt to remove the oven and backburner from the barbecue prior to or during installation. Damage to the connecting gas line and igniter wiring may occur.

The plastic straps that secure the oven to the barbecue unit should be removed and discarded prior to lighting.

Replacement parts can be ordered from your local American Outdoor Grill dealer.

‡ Not shown
PATIO MOUNT INSTALLATION

It is not required to remove the control panel or knobs to install this unit.

DO NOT lift the unit from the control panel when installing.

PREPARE FOR INSTALLATION

Consult a qualified professional installer.

The flex connector can be routed out the back of the post, under the post base, or inside the post. The power supply cord is to be routed out the back.

To gain access to the inside of the post, unscrew and carefully open the access plate on the rear of the post using a medium Phillips-head screwdriver. Retain the screws.

A power supply is pre-mounted to the access plate. For ease of installation, disconnect the converter harness from the power supply. Locate the wires coming from the inside of the post to the power supply and carefully disconnect (see Fig. 17-1 and 17-2).

Important: Pull from the connectors (not the wires).

ROUTE POWER SUPPLY CORD

The power cord will need to be routed through the access plate for later connection to a 120VAC (15 AMP minimum) GFCI GROUNDED 3-wire receptacle. The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.

1. Remove the knock-out disc at the bottom left of the access plate with a large flathead screwdriver. (Insert the screwdriver into the notch provided in the center of the knock-out.)
2. Remove the plastic power cord bushing attached to the power cord.
3. Feed the power cord through the newly created hole.
4. Install the bushing onto the power cord and slide the bushing up against the access plate knock-out hole and snap into place. See Fig. 17-1.

ROUTE FLEX CONNECTOR

The gas supply line will need to be run to the post install location as appropriate for the desired setup.

To route flex connector through rear of post:

1. Remove the knock-out disk at the bottom right of the access plate with a large flathead screwdriver. (Insert the screwdriver into the notch provided in the center of the knock-out.)
2. Remove the plastic grommet (attached to the flex connector) and insert it into the newly created opening. Then route the flex connector through the opening. See Fig. 17-1 and 17-2.

To route flex connector beneath post base:

Route the flex connector through the hole found beneath the center of the post base (see Fig. 17-3).
CONNECT THE GAS SUPPLY

For household propane or natural gas units:
1. Route the flex connector to the gas stub.
2. Turn OFF the gas supply at the source.
3. A shut-off valve is required within 6 feet of the unit.

If shut-off valve is installed in-line:
- Install the supplied flare adapter to the gas supply using a pipe joint compound resistant to all gasses (see Fig. 18-2, A). Tighten securely.
- Connect the flex connector to the flare adapter (see Fig. 18-2, A). Tighten securely.

If shut-off valve is connected to end of gas supply stub:
- Connect the flex connector to the shut-off valve (see Fig. 18-2, B). Tighten securely.

For propane cylinders:
For connecting a propane unit to a portable propane tank, read the safety warnings and follow the instructions in the section SAFE USE AND MAINTENANCE OF PROPANE GAS CYLINDERS.

Important: An appropriate adapter will be required to connect the existing flex connector to an L.P. regulator/hose assembly.

LEAK TEST

Turn all burner control knobs to the OFF position. Turn the gas supply on. Then carefully check all gas connections for leaks with a brush and half-soap/half-water solution before lighting. NEVER USE A MATCH OR OPEN FLAME TO TEST FOR LEAKS.

RECONNECT POWER SUPPLY WIRES

CAUTION: IMPROPERLY CONNECTED WIRES WILL CAUSE DAMAGE TO THE GRILL AND MAY RESULT IN PROPERTY DAMAGE AND/OR PERSONAL INJURY.

To connect the power supply box, connect the converter harness to the power supply as shown in Fig. 18-1.

Important: Apply dielectric grease to the male connectors prior to making any wire connections.

RE-SECURE ACCESS PLATE

Carefully replace the access plate using the four screws, ensuring all interior components are properly oriented inside of the grill. Ensure the power supply cord (and flex connector if applicable) coming out of the rear of the post are properly situated and the plastic bushing/grommet pieces are secure in place.

CONNECT POWER CORD

Connect the cord coming from the rear access plate to a 120VAC (15 AMP minimum) GFCI GROUNDED 3-wire receptacle. The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.

SECURING THE PATIO MOUNT GRILL

Important: BEFORE USE, the patio mount base must be securely fastened to a stable, level surface to ensure the grill remains fixed and upright at all times.

Locate the patio mount base in the planned grill location and mark the 4 holes. Drill the marked holes to a 1/2" diameter x 1 1/2" depth. Insert the lag shields (see PARTS LIST) into the holes, being sure that they are flush with the ground.

Align the holes on the patio mount base over the lag shields in the ground. Secure the base with the lag screws (see PARTS LIST) using a 7/16” nut driver.
It is not required to remove the control panel or knobs to install this unit. DO NOT lift the unit from the control panel when installing.

**PREPARE FOR INSTALLATION**

Consult a qualified professional installer / licensed contractor.

The in-ground post is designed primarily for installation with a permanent underground gas supply. The power supply cord is to be routed out the back.

To gain access to the inside of the post, unscrew and carefully open the access plate on the rear of the post using a medium Phillips-head screwdriver. Retain the screws.

A power supply is pre-mounted to the access plate. For ease of installation, disconnect the converter harness from the power supply. Locate the wires coming from the inside of the post to the power supply and carefully disconnect (see Fig. 19-1 and 19-2).

**Important:** Pull from the connectors (not the wires).

**ROUTE POWER SUPPLY CORD**

The power cord will need to be routed through the access plate for later connection to a **120VAC (15 AMP minimum) GFCI GROUNDED 3-wire receptacle.** The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.

1. Remove the knock-out disc at the bottom left of the access plate with a large flathead screwdriver. (Insert the screwdriver into the notch provided in the center of the knock-out.)
2. Remove the plastic power cord bushing attached to the power cord.
3. Feed the power cord through the newly created hole.
4. Install the bushing onto the power cord and slide the bushing up against the access plate knock-out hole and snap into place. See Fig. 19-1.

**ROUTE GAS SUPPLY (UNDERGROUND METHOD)**

**Note:** This section addresses an underground gas supply setup. To connect through the rear of the post, reference the **ROUTE FLEX CONNECTOR** section of **PATIO-MOUNT INSTALLATION**, and do not perform the steps until after: attaching the extension post, and installing the post / pouring the concrete.

1. After running the underground gas supply line to the planned grill location, dig a hole for the post and extension approximately 18" deep and 10-12" in diameter.
2. Run the gas supply line up from the bottom of the hole (a little off center) so that it reaches to approximately 4" above ground level.
3. The actual depth of the hole should be such that the shelf surface is approximately 36.5" above ground level.

2. Verify that the gas supply line fits through the gas line clearance hole in the bottom of the post (see Fig. 19-3). The clearance hole is the larger of the two holes in the bottom of the post and is off center.
3. Verify that the flex connector coming from the inside of the post will connect properly with the gas supply line.
ATTACH POST EXTENSION

1. Attach the extension to the bottom of the grill post so that the open portion is toward the back of the grill and the five holes in the extension line up with the five (5) weld-nuts in the post (see Fig. 20-1).

2. From outside the joined post and extension, insert one of the \( \frac{1}{4} \times 20\)-inch-\( \frac{5}{8} \) bolts (supplied) into each of the five (5) bolt holes and tighten each using a 7/16" socket driver or wrench (see Fig. 20-2).

Note: There is one hole on each side of the post, except the back which has two holes located on either side of the extension opening.

PLACE POST IN-GROUND & POUR CONCRETE

1. Prepare the concrete to be used for the install.
2. Carefully orient the post over the gas supply line and into the installation hole.

Important: Verify that the gas supply line is running up through the post hole, just off center. It must extend high enough to reach the grill gas connection and remain safely above the level of the concrete when poured.

3. Remove the post, then cover the end of the gas supply line with a plastic bag and/or masking tape to avoid getting concrete or other debris in the supply line.

4. Pour the concrete into the hole 3-5" below ground level taking care to protect the gas supply line.

5. While the concrete is still wet, carefully lower the extended grill post into the hole so that the gas supply line slides through the clearance hole in the bottom of the post.

6. Orient the grill per plan, then level the grill and support it so that it remains in position while the concrete dries.

ROUTE FLEX CONNECTOR (ABOVE GROUND METHOD ONLY)

Note: This section addresses an above ground gas supply setup. If connecting underground, skip this section and continue with installation.

The gas supply line will need to be run to the post install location as appropriate for the desired setup.

To route flex connector through rear of post:

1. Remove the knock-out disk at the bottom of the access plate with a large flathead screwdriver. (Insert the screwdriver into the notch provided in the center of the knock-out.)

2. Remove the plastic grommet (attached to the flex connector) and insert it into the newly created opening. Then route the flex connector through the opening. See Fig. 20-4.
CONNECT THE GAS SUPPLY

For household propane or natural gas units:
1. Route the flex connector to the gas stub.
2. Turn OFF the gas supply at the source.
3. A shut-off valve is required within 6 feet of the unit.
   - **If shut-off valve is installed in-line:**
     - Install the supplied flare adapter to the gas supply using a pipe joint compound resistant to all gasses (see Fig. 21-1, A). Tighten securely.
     - Connect the flex connector to the flare adapter (see Fig. 21-1, A). Tighten securely.
   - **If shut-off valve is connected to end of gas supply stub:**
     - Connect the flex connector to the shut-off valve (see Fig. 21-1, B). Tighten securely.

For propane cylinders:

For connecting a propane unit to a portable propane tank, read the safety warnings and follow the instructions in the section SAFE USE AND MAINTENANCE OF PROPANE GAS CYLINDERS.

**Important:** An appropriate adapter will be required to connect the existing flex connector to an L.P. regulator/hose assembly.

LEAK TEST

Turn all burner control knobs to the OFF position. Turn the gas supply on. Then carefully check all gas connections for leaks with a brush and half-soap/half-water solution before lighting. NEVER USE A MATCH OR OPEN FLAME TO TEST FOR LEAKS.

RECONNECT POWER SUPPLY WIRES

**CAUTION:** IMPROPERLY CONNECTED WIRES WILL CAUSE DAMAGE TO THE GRILL AND MAY RESULT IN PROPERTY DAMAGE AND/OR PERSONAL INJURY.

**To connect the power supply box**, connect the converter harness to the power supply as shown in Fig. 21-2.

**Important:** Apply dielectric grease to the male connectors prior to making any wire connections.

RE-SECURE ACCESS PLATE

Carefully replace the access plate using the four screws, ensuring all interior components are properly oriented inside of the grill. Ensure the power supply cord (and flex connector if applicable) coming out of the rear of the post are properly situated and the plastic bushing/grommet pieces are secure in place.

CONNECT POWER CORD

Connect the cord coming from the rear access plate to a 120VAC (15 AMP minimum) GFCI GROUNDED 3-wire receptacle. The GFCI receptacle must be a WEATHER-PROOF IN-USE COVERED RECEPTACLE.

**WARNING**

**Electrical Grounding Instructions:**

This appliance is equipped with a three-pronged (grounding) plug for your protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. Do not cut or remove the grounding prong from this plug.
INSTALL THE VAPORIZER PANELS
Place the vaporizer panels directly onto the studs on the burners. See Fig. 22-1. The vaporizer panels allow heat from the burners to be evenly distributed throughout the cooking area.

INSTALL THE COOKING GRIDS
Place each cooking grid onto the front and rear grid rests of the grill. See Fig. 22-2.

INSTALL THE DRIP TRAY
Fully insert the drip tray into the bottom front of the control panel. See Fig. 22-3.
INSTALL THE WARMING RACK

Note: Wear heat-resistant gloves if necessary.

The warming rack (Fig. 23-1) is packed separately. To install the warming rack, carefully insert the rack hangers into the two holes in the back of the inner oven hood, then lower the front of the rack to a level position.

Note: Placing the warming rack in storage position or removing the warming rack before using the rotisserie will leave more clearance for the meat being cooked (if applicable).

INSTALL THE RIGID SHELVES

This grill comes with two (2) rigid shelves that must be attached. These can be attached using the four support screws provided and a Phillips-head screw driver.

Important: Take caution to not cross-thread when tightening the screws.

1. Hold the shelf inverted so that one of the corner holes in the shelf lines up with the appropriate upper screw hole in the grill.

2. Insert the screw, but do not tighten all the way so that the shelf can be easily rotated around the first screw.

3. Line up the second corner hole in the shelf with the remaining upper screw hole in the grill. Insert a screw and tighten.

Note: You may lift the edge of the shelf upward to gain better access during much of the tightening of this screw.

4. Finally, insert the bottom screws on the left and right side of the shelf and securely tighten all screws.

To detach, reverse the process above.
* The light switch is push button operated, and is located on the right side of the control panel. It controls the power to all lights.

**Fig. 24-1** Grill controls
BEFORE INITIAL USE

Ensure that:

- the unit has been properly installed and leak tested by a qualified professional service technician and as instructed in this manual.
- you have read and understand all of the information in this manual.

BEFORE EACH USE

Ensure that:

- you smell around the appliance area for gas. If you smell gas (and all control knobs are in the OFF position), immediately shut off the gas supply and contact a qualified professional service technician or the gas supplier for inspection.
- the vent openings and surrounding area of the unit are clear and free at all times.
- the cooking area and drip tray are clean, and the drip tray is properly installed.
- you inspect all piping and hoses for damage, cuts, wear, and tear. Replace any damaged components prior to use.

OPERATION

- The unit becomes HOT during use. NEVER touch any part of the cooking area or surrounding hot surfaces with bare hands. Use long-handled insulated BBQ tools and wear an insulated glove / oven mitt.
- Always keep your face and body as far from the unit as possible during use. Avoid wearing loose-fitting clothing as they could ignite.
- NEVER use charcoal or any other solid-fuel in the unit.
- NEVER leave the unit unattended during use.
- NEVER cover more than 75% of the cooking or grill surface with griddles or pans to prevent overheating.

After reading and understanding all bullets above, follow these steps to light and use your grill:

1. Light the grill per the LIGHTING INSTRUCTIONS section.
2. Turn the control knobs to the HI-LIGHT position, close the hood, and allow the grill to preheat for 15 minutes or until desired cooking temperature is reached.
3. Place the food on the grill and cook as desired. Monitor the flames and the temperature, and adjust the heat setting if necessary. Ensure the timer on the unit remains on during cooking - see LIGHTING INSTRUCTIONS section.
4. See the sections below and the following pages for all other information regarding use.

WIND CONSIDERATIONS

Proper airflow (front-to-back, Fig. 25-1) MUST be maintained for the unit to perform as it was designed. See the INSTALLATION REQUIREMENTS section for details.

When using the unit in windy conditions, the wind can disrupt the airflow and cause overheating. To prevent overheating during windy conditions, do not leave the hood closed with the burners on high for more than 15 minutes.

AFTER EACH USE

1. Brush the cooking grids to remove all residue.
2. Operate on high with hood closed for 10-15 minutes to burn off all grease.
3. Cover the grill once it has completely cooled.

Note: For additional cleaning information, refer to the SERVICING AND CLEANING section.
ÉCLAIRAGE ÉLECTRONIQUE
Note: Le unité doit être relié à la puissance 120VAC pour l’éclairage électronique.
1. Ouvrez les couvercles ou enlevez les couvertures des brûleurs pour être Lit.
2. Tournez tous les boutons de commande de gaz à leurs positions de repos.
3. Allumez le gaz à sa source.
4. Placez le bouton de commande de temporisateur au temps de cuisson.

Note: N’ouvrez pas plus d’une valve à la fois pour l’éclairage électronique ou manuel.

ATTENTION : Si un brûleur ne s’allume pas dans cinq (5) secondes, assurez-vous que l’allumeur produit des étincelles (vous entendrez un « clic »), puis appuyez sur le bouton de commande souhaité et, tout en appuyant sur, tournez-le dans le sens antihoraire jusqu’à la position HI LIGHT. Une fois le brûleur allumé, relâchez le bouton de commande et le commutateur d’allumage.

ÉCLAIRAGE MANUEL

ATTENTION: Attendez toujours cinq (5) minutes le gaz pour se dégager après que n’importe quelle tentative non réussie d’éclairage.

1. Suivez les étapes 1 à 4 (à gauche).
2. Insérez soit un brûleur long baril briquet au butane, un match à longue tige de brûlure, ou une allumette en feu détenues par un titulaire d’extension de fil (Fig. 26-2) À travers les grilles de cuisson du brûleur (Fig. 26-3). Pour backburners, maintenez la flamme contre le matériau perforé de la veilleuse.
3. Tout en maintenant le match ou flamme d’un briquet à proximité du brûleur, appuyez sur le bouton de contrôle approprié et en appuyant son tour dans le sens antihoraire à la position LIGHT HI. Retirez le briquet ou des allumettes quand le brûleur s’allume, puis relâchez le bouton de commande.
4. Si le brûleur ne se allume pas dans cinq (5) secondes de tourner le bouton de commande, appuyez immédiatement sur le bouton et tournez la valve sur OFF. Attendez cinq (5) minutes avant de répéter les étapes 2 à 4 des instructions du manuel d’éclairage.

ARRÊT DU UNITÉ

Pour couper le unité, diminuez chaque bouton de commande de valve et tout en pressant tour il dans le sens des aiguilles d’une montre à la position de repos.

Fermez toujours la valve de la fourniture de gaz après chaque utilisation du unité.

ÉTABLISSEMENT DU TEMPORISATEUR

Pour l’utiliser, placez le sélecteur (tournant dans le sens horaire) à l’heure souhaitée pour couper. Le cadran est marqué en 3 tranches d’une minute vingt (Toute position entre les deux est une estimation du fait que le temps). Le cadran de la minuterie rotation automatique (sens anti-horaire) et coupera l’alimentation en gaz lorsque la molette atteint OFF (le temps est terminé).

Important: Lorsque vous utilisez la minuterie pour des périodes de moins de vingt minutes, vous devez d’abord régler le cadran à vingt minutes (pour activer), puis retour (sens anti-horaire) à la quantité désirée de temps. Cela permettra d’assurer le bon fonctionnement de la minuterie. Voir Fig. 26- 4.

EMPLOYANT UN RÉSERVOIR DE PROPANE PORTATIF

Des réservoirs de propane sont équipés d’un dispositif d’arrêt de sûreté qui peut ne pas causer le bas ou aucunes pression de gaz/flamme aux brûleurs si le fonctionnement et l’allumage des instructions ne sont pas suivis exactement (voir la note importante dans la section de dépannage pour plus de détails.)

Pour votre convenance et sûreté ; quand le bouton de commande est tourné à la position de fonctionnement, l’indicateur d’écoulement de gaz changera de bleu en le rouge. (Le rouge indique l’écoulement de gaz.) Voir la Fig. 26-1.
LIGHTING (IGNITION) INSTRUCTIONS

Read all instructions before lighting, and follow these instructions each time you light the unit.

ELECTRONIC LIGHTING

Note: This unit must be connected to 120VAC power for electronic lighting.

1. Open lid(s) or remove cover(s) from burner(s) to be lit.
2. Turn all gas control knob(s) to their OFF position(s).
3. Turn on the gas at its source.

Note: DO NOT turn on more than one valve at a time for either electronic or manual lighting.

4. Set the timer control knob to the desired cooking time. See SETTING THE TIMER section below.
5. Press and hold the igniter switch. Ensure the igniter is sparking (it will create a “clicking” sound), then, depress the desired control knob, and while pressing turn it counterclockwise to the HI LIGHT position. Once the burner lights, release the control knob and igniter switch.

CAUTION: If a burner does not light within five (5) seconds of turning on the control knob, depress the knob and turn it to the OFF position. WAIT FIVE (5) MINUTES before repeating step 4. If you smell gas, follow the instructions on the cover of this manual. If the burners still do not light after several attempts, refer to the instructions for manual lighting.

6. Repeat step 5 for each additional burner to be lit.

SETTING THE TIMER

To use, set the dial (turn clockwise) to the desired time to shut off. The dial is marked in 3 twenty minute increments (any position in between is an estimate of that set time). The timer dial will auto rotate (counter-clockwise) and will shut off the gas supply when the dial reaches OFF (i.e. the time is completed).

Important: When using the timer for periods of less than twenty minutes, you must first set the dial to twenty minutes (to activate), then return (counter-clockwise) to the desired amount of time. This will ensure proper timer operation. See Fig. 27-4.

MANUAL LIGHTING

CAUTION: Always wait five (5) minutes for gas to clear after any unsuccessful lighting attempt.

1. Follow steps 1 through 4 (left).
2. Insert either a burning long-barrel butane lighter, a burning long-stem match, or a burning match held by a wire extension holder (Fig. 27-2) through the cooking grids to the burner (Fig. 27-3). For backburners, hold the flame against the perforated material of the backburner.
3. While holding the match or lighter flame next to the burner, depress the appropriate control knob and while pressing turn it counterclockwise to the HI LIGHT position. Remove the lighter or match when the burner lights, and release the control knob.
4. If the burner does not light within five (5) seconds of turning the control knob, immediately depress the knob and turn the valve to OFF. WAIT FIVE (5) MINUTES before repeating steps 2 through 4 of the MANUAL LIGHTING instructions.

SHUTTING OFF THE UNIT

To shut off the unit, depress each valve control knob and while pressing turn it clockwise to the OFF position. Always close the valve from the gas supply after each use of the unit.

WHEN USING A PORTABLE PROPANE TANK

Propane tanks are equipped with a safety shutdown device that may cause low or no gas pressure/flame at the burners if operating and lighting instructions are not followed exactly (See important note in the TROUBLESHOOTING section for more details.)

For your convenience and safety: when the control knob is turned to the on position, the gas flow indicator will change from blue to red. (Red indicates gas flow.) See Fig. 27-1.
The infrared (IR) searing burner (optional) cooks with a powerful radiant heat.

**NOTE:** ONLY ONE INFRARED BURNER IS PERMITTED FOR USE ON AOG GRILLS.

Light the infrared burner following the LIGHTING INSTRUCTIONS in this manual or printed on the drip tray. Follow these guidelines when operating the Infrared burner:

- **DO NOT** place food on the cooking grid until the IR burner glows orange (Fig. 28-3). Drippings are heated and evaporate instead of sticking to and impairing burner function.

- For cleaning purposes; always leave your burner on (after cooking) for an additional 5 minutes, to allow for a burnoff period. This is important to keep your burner clean and operating properly.

As the burner is self cleaning (at full temperature); avoid the use of cleaners or abrasives.

- When not in use, **always** cover the infrared burner with the stainless-steel cover. This protects the burner from drippings (from other cooking), water, airborne particles, and foreign objects (Fig. 28-2).

**Important:** Clean burners allow the gas to circulate and burn over the entire heating surface for powerful and even cooking.

- Do not strike or scrape the ceramic portion of the burner as it may chip, crack, or break (Fig. 28-2).

**Important:** When grilling with the infrared burner, always place a cooking grid above it. The cooking grid must be removed for rotisserie cooking.

**CAUTION:** **DO NOT** operate your IR burner with the oven hood closed.

**CAUTION:** Never attempt to operate the IR burner with the protective cover in place.

**WARNING**

Only handle the infrared burner cover when the unit is cold or with a well-insulated long-handled tool or heat resistant gloves.

**SIDE VIEW** (with cover on)

Burner ceramic must be protected with cover when burner is **not in use.**

**SIDE VIEW** (burner on HI LIGHT and glowing orange)

Drips and particles evaporate before hitting infrared burner when cooking at the maximum setting.

**Note:** Vaporizer panels are not to be used with infrared burners.

To ensure proper operation, all infrared burners (back and main) must be operated on the HI setting for a minimum of 10 minutes. Thereafter, the flame may be lowered as desired.

**CAUTION:** Always monitor the infrared burner flame when operated on low, as it may blow out in high-wind conditions.
CAUTION: WHEN USING THE BACKBURNER; KEEP THE OVEN LID CLOSED TO PREVENT HEAT LOSS, PROVIDE PROPER CONVECTION, AND PROVIDE PROPER VENTING. THIS WILL ENSURE EVEN COOKING TEMPERATURES. DO NOT KEEP YOUR OVEN LID OPEN DURING ROTISSING, AS THIS MAY CAUSE PERSONAL INJURY, OR IN SOME CASES, IN WINDY CONDITIONS, DAMAGE TO THE GRILL. DO NOT USE THE ROTISSERIE MOTOR IN THE RAIN. DO NOT LEAVE THE MOTOR ON THE GRILL WHEN NOT IN USE.

1. Remove the warming rack and cooking grids from the barbecue. The vaporizer panels may also be removed if required.

Tip: Aluminum foil or a baking pan is recommended and may be placed over the main burners / vaporizer panels, a little forward of center, to catch excess drippings from the meat.

2. Attach the rotisserie motor to the rotisserie mounting on the right side of your barbecue by sliding the bracket attached to the motor onto the tab on the right of the barbecue. The motor should be installed so that the spit rod will fit into the motor drive socket from the left.

3. Slide the left spit prong onto the rod (and tighten), the meat onto the rod and into the prong, followed by the right spit prong onto the rod and into the meat. Tighten the right spit prong. Be sure the meat is centered and balanced as well as possible.

4. Insert the pointed end of the rod into the motor drive socket and the groove next to the handle into the left support bracket.

5. Plug in (if necessary) and turn on the rotisserie motor.

6. Light backburner per lighting instructions in this manual (or on drip tray handle) and close oven lid.

7. Allow the backburner to preheat for approximately 10 minutes on HI LIGHT setting.

Note: When burning properly, the backburner grating will glow red. The first time it is used the backburner may smoke a little.

Important: Turn the backburner to low or off when stopping the rotisserie to prevent overcooking.
You grill requires regular cleaning and maintenance. Refer to these instructions for details. Performing these procedures will ensure proper operation, appearance, and safety.

WARNINGS

- Prior to servicing or cleaning make sure the unit is completely cool, the control knobs are turned to the OFF position, the gas supply is shut off, the light switch is off, and the power supply is disconnected (as applicable and unless otherwise stated).
- Wear appropriate gloves and safety glasses during any servicing or cleaning.
- DO NOT spray any cleaner or liquids on the grill when hot.
- The grill MUST be cleaned regularly to prevent grease build-up and other food deposits. A clean and well maintained grill prevents the risk of grease build-up and grease fires.
- Verify proper operation after servicing or deep cleaning.
- See INSTALLATION, OPERATION, AND SAFETY INFORMATION section for additional related information.

CLEANING YOUR GRILL

Before Each Use

1. Inspect and clean the exterior surfaces of the unit: With a cool grill, clean any dust, grease, splatter, or spills as needed with a damp clean cloth.

After Each Use

1. Perform a burn-off and clean the cooking grids: Operate the grill on high with the hood closed for 15 minutes to burn-off food and grease and allow for an easier cooking grid clean. Then turn OFF the grill and use a grill brush to clean the cooking grids of all residue. Wear protective gloves and use caution around hot surfaces.
2. Check and clean your drip tray: When the grill is cool, carefully remove the drip tray and dispose of contents appropriately. Clean tray in a soapy water solution if needed. For tough deposits, a copper pad can be used. Rinse and dry completely.
3. Cover your grill: Once the grill is dry and cool, cover your grill with a vinyl cover.

Twice A Year (or as needed) - Deep Clean

1. Interior of grill: In addition to cleaning the cooking grids and drip tray, a deep clean of the interior of the grill, burners, and all components MUST be performed twice year (or as needed depending on use). Refer to the CARE, CLEANING, & MAINTENANCE GUIDE manual provided with your grill, or simply scan the QR code on the right.

Important: The burner ports and carry-over ports/slots MUST be kept clean to ensure proper ignition and operation. The guide provides all details on cleaning.

2. Exterior of grill: With a cool grill, use a grill cleaner (or a soapy water solution) and a clean cloth to remove grease and dirt from the outside of the grill. For tough deposits, a copper pad can be used. Always wipe with the grain. Rinse and dry completely. Then follow up with a stainless steel cleaner and a clean cloth. DO NOT use other cleaners or chemicals.

If this routine cleaning is not performed, the stainless steel may become dull and develop surface rust (due to use and atmospheric conditions). If left uncleaned, significant damage and pitting may occur.

Important: DO NOT use steel wool, any other metal tools, or any other cleaners/chemicals to clean the exterior other than recommended above. Such items promote rust.

Note: Due to the nature of stainless steel, temperatures produced by the grilling process will cause discoloration. This can be reduced by routine cleaning.
SERVICING AND CLEANING (cont.)

For Environments High In Salt, Chloride, Or Other Corrosive Chemicals
When this grill is installed in a corrosive environment such as near the ocean (salt air), poolside (chlorine and/or pool chemicals) or any other location with exposure to high salt/chloride content or corrosive chemicals/solutions, it will be more susceptible to corrosion and MUST be maintained/cleaned more frequently.

• **DO NOT** store any corrosive chemicals (chlorine, hydrochloric acid, fertilizer, etc.) near your stainless steel grill.
• **DO NOT** allow any corrosive materials (masonry dust, debris, etc.) to settle on your stainless steel grill.
• These environments, chemicals, and materials may cause the 304 stainless steel to develop surface rust and consequently pitting. Under these conditions the grill exterior MUST be cleaned at least monthly. Inspect your grill often and clean accordingly.

Protecting Your Grill
An optional vinyl cover will protect your grill when not in use. Install the cover on a cool and dry grill. **DO NOT** cover a damp grill. During high humidity or after rainy conditions, remove the cover to dry trapped moisture if present. (If the cover is installed over a damp grill it can cause surface rust.)

Ensure that the INSIDE of the cover is **DRY** before putting it back on the grill.
REPLACING HALOGEN BULBS

Your grill is engineered with the conveniences of electrical power for illuminating and igniting the grill. To replace any interior oven light, follow the instructions below.

Important: ONLY REPLACE WITH 12V / 10 WATT HALOGEN BULB(S).

WARNING

To protect from potentially sharp sheet metal and glass, wear gloves and safety glasses during this procedure.

1. Turn all burner control knobs to the OFF position and shut off the gas supply to the grill at the source (tank valve for propane units or gas line shut-off valve for natural gas units.)

2. Disconnect supply of external electrical power to the grill.

CAUTION: Wait for the grill, oven, lens, light bulb, and fixture to cool before proceeding to the next step.

3. Open the oven lid.

Important: Place one hand directly below the glass lens and prepare to catch it when it is detached.

4. Carefully insert a standard flat head screwdriver or thin plastic spatula between the glass lens and the stainless steel on which the light is mounted and gently pry the glass lens out in such a way that the stainless steel is not scratched (twisting the screwdriver handle, for instance). Catch the lens and set it safely aside.

Note: You may wish to take this opportunity to clean the lens with a standard household window cleaner and then dry it completely.

5. Wearing a pair of gloves, reach into the fixture, gently grab the bulb, and pull it straight out of the fixture so that the two pins at the base of the bulb come all the way out.

Important: Bulb is halogen. DO NOT TOUCH with bare hands. Oils from hands drastically reduce bulb life.

Note: It may be helpful to rock the bulb gently backward and forward while pulling it out.

6. Inspect the old bulb for broken glass or filament.

Note: It may be beneficial to test a suspect bulb in one of the other light fixtures known to be working and turn the power back on to be certain the bulb is actually not working.

7. Insert the new 12V / 10 watt halogen bulb into the socket so that both pins slide all the way into the two holes in the bottom of the socket.

8. Place the lens back into the fixture opening with the curved cutout on the bottom and snap it back into place.
SERVICING AND CLEANING (Cont.)

CONVERT GAS TYPE / CHECK BURNER ORIFICES

CAUTION: Make sure the grill is at a safe temperature and isolated from gas and electrical supplies before beginning.

For your safety, exercise caution, and make sure you have adequate hand protection, such as gloves, when handling metal parts.

Apply Conversion Label

This grill comes from the factory configured for one type of gas as marked on the label behind the control panel. When the grill is converted, the label for the new gas (included at original shipping) MUST be filled out and applied next to the existing label mentioned above.

Convert Regulator

The gas regulator, located in the post, must be set for the type of gas used to fuel the grill. To check the regulator setting, remove the cap in the center of the regulator (Fig. 33-1, A). Holding the cap vertical (see Fig. 33-1, B), the letters at the bottom of the plastic stalk indicate the gas type for which the regulator is currently configured.

If the text on the bottom of the regulator stalk does not match the gas type connected to the grill, remove the stalk from the cap, invert, and replace into center of cap. Replace cap on the regulator, screwing down until snug.

Convert Gas Orifices

When converting the grill to a different gas type, each burner’s orifice must be replaced with the corresponding orifice for the new gas.

See SPECIFICATIONS TABLE, Table 1 to determine the proper orifice sizes for each burner.

See the following sections for details on orifice conversion.

Important: It is critical to the operation of each burner that its orifice be fully inserted into the center of its orifice opening.

WARNING HAZARDOUS OVERHEATING WILL OCCUR IF A NATURAL-GAS ORIFICE IS USED WITH PROPANE GAS.

Connect To New Gas Supply

Plumb the unit as appropriate for the new gas supply. (Additional components may be needed for your specific setup.) Be sure to leak test at all connections.

Convert/Check Main Burner Orifices

Note: It may be necessary to remove the rotisserie rod before beginning this procedure.

1. Remove the cooking grids and vaporizer panels and set them aside.
2. Remove the burners (see BURNER REMOVAL section for step-by-step instructions).
3. Use a $\frac{1}{2}''$ hex deep socket nut driver to remove the exposed orifices. Access the orifices through the holes in the forward firebox plate inside the grill (see Fig. 33-2, A). Check orifices. If needed, replace all with the correct orifices for the new gas.

Alternatively, the orifices can be accessed through the inside of the control panel if the proper tool is not available (see Fig. 33-2, B). This allows a $\frac{1}{2}''$ open-end wrench to be used instead of a $\frac{1}{2}''$ hex deep socket nut driver. To open the control panel, see the CONTROL PANEL REMOVAL section.

Procedure continued on next page
4. Replace burners (See BURNER REMOVAL section).

Note: It is critical to the continued safe functioning of the burners that the orifices are centered and completely inside the burner gas inlets.

5. Replace the vaporizer panels and the cooking grids.

6. If applicable, reinstall the control panel.

Convert/Check Backburner Orifice (if equipped)

Note: It may be necessary to remove the rotisserie rod before beginning this procedure.

1. Remove the backburner electrode mounting screw (1/4" hex) (see Fig. 34-2, A) and loosen the electrode. Carefully pull the electrode assembly slightly from the grill wall to give enough clearance for the backburner to be removed (see Fig. 34-2, B).

2. Remove the backburner mounting screws (1/4" hex) located at the left end of the backburner assembly (see Fig. 34-3).

3. Carefully pull the left end of the backburner forward until the burner can be moved to the left pulling it free from the orifice located on the right side (see Fig. 34-4).

4. Use a 3/8" hex nut driver to remove the exposed orifice. Check orifice. If needed, replace it with the correct orifice for the new gas.

5. Replace the backburner assembly and the electrode by reversing the procedure in steps 1 through 3.

Procedure continued on next page
Convert/Check Infrared Burner Orifice (if equipped)

**Note:** It may be necessary to remove the rotisserie rod before beginning this procedure.

1. Remove the cooking grid from above the burner you are working on and set it aside.

2. Disconnect the igniter wire from the bottom of the electrode assembly on the infrared burner (see Fig. 35-1).

3. Carefully lift the infrared burner from the burner support and out from the hole in the forward fire wall (see Fig. 35-2).

4. Use a \(\frac{1}{2}\)" hex nut driver to remove the exposed orifice. Access it through the hole in the forward firebox plate inside the grill (Fig. 35-2). Check orifice. If needed, replace it with the correct orifice for the new gas.

Alternatively, the orifice can be accessed through the inside of the control panel if the proper tool is not available. This allows a \(\frac{1}{2}\)" open-end wrench to be used instead of a \(\frac{1}{2}\)" deep socket nut driver. To open the control panel, see the CONTROL PANEL REMOVAL section.

5. Replace the infrared burner over the orifice fitting, sliding it forward, from behind the forward fire wall, so the orifice is centered inside the burner gas inlet, and set it gently onto the burner support. The tabs on the bottom back of the burner must each fit through their respective slots in the burner support.

**Note:** It is critical to the continued safe functioning of the burner that the orifice is centered and completely inside the burner gas inlet.

6. Reconnect the igniter wire to the bottom of the electrode assembly on the infrared burner.

7. Replace the cooking grid.

8. Repeat for each infrared burner as necessary.

9. If applicable, reinstall the control panel.
**AIR SHUTTER ADJUSTMENT**

**Important:** This appliance may not light or heat evenly or cook properly unless the air shutters are adjusted following installation (see AIR SHUTTER ADJUSTMENT section).

Burner air shutters are easily accessed by removing the control panel. See the CONTROL PANEL REMOVAL section for access.

The air shutters are located on the front portion of each burner and have a locking screw that prevents the air shutter from inadvertent movement (see Fig. 36-1).

Remove the cooking grids & vaporizer panels from the grill.

To close or open the air shutters, simply loosen the locking screw, using a long stemmed Phillips screwdriver, and turn the air shutter to open or close it. Tighten the screws down when the desired setting is achieved.

**Main Burner**

Light the burner to be adjusted in accordance with the LIGHTING INSTRUCTIONS and burn for 2 minutes with the burner control knob set to **HIGH** and the oven open. After burning for 2 minutes, open the air shutter until the flames lift off, or appear not to be touching the burner. Then begin closing the air shutter until the flames appear to burn while touching the burner ports (Fig. 36-2). If flames are a lazy yellow, open the air shutters until the flame is mostly blue.

**Note:** Grills in some installations achieve a better air/gas mixture and will ignite more quickly if the valve is first turned beyond **HIGH** to **MEDIUM** or **LOW** for lighting.

---

**Fig. 36-1**

**Fig. 36-2 - Flame appearance diagram**
CONTROL PANEL REMOVAL

1. Turn the control knobs to the OFF position and turn off the gas supply to the grill.
2. Turn off the light switch and disconnect the unit from the power source.
3. Pull the control knobs from their stems and set them aside.
4. Slowly lift away the lighted bezels to clear the valve stems, and carefully disconnect the wires found on the back of the bezels (use your fingernail). See Fig. 37-1.
5. Using a Phillips screwdriver, unscrew the control panel fastener screws (located on the sides of the control panel). Retain the screws for later re-installation.
6. Carefully open the control panel by lifting and pulling the control panel from the frame.

Important: When opening, take caution to not damage any wiring. The drip tray can be opened slightly to support the control panel.

To completely remove the control panel:

1. Follow steps 1-5 above.
2. Disconnect the main wire harness connections (A), the left light connection (B), the right light connection (C), and the igniter wires (D). It is recommended to temporarily label the wires for reference when reconnecting. See Fig. 37-1. When disconnecting, be sure to pull from the connectors, and not the wires.

Note: Secure any disconnected wires (coming from the inside of the grill) to prevent them from falling into the unit.
3. Carefully remove the control panel.

Note: Whenever reconnecting any wires, apply a small amount of dielectric grease to the male connector, then make the connection. This will ensure conductivity and prevent moisture from affecting the contact.

Important: During reinstallation; prior to opening the gas shut-off valve, be sure the control knob(s) are in the OFF position.

---

24" model shown (connections may vary)
FUSE REPLACEMENT

If the unit is connected to the power supply but the ignition system and interior oven lights are not functioning, fuse replacement may be required.

1. Ensure the knobs are in the OFF position, the gas supply is turned off, and the light switch is off.
2. Disconnect the power supply cord from line power.
3. Locate the fuse holder on the power supply box (see Fig. 38-1).
4. Turn the fuse cap counterclockwise to remove the cap and access the fuse.
5. Replace with a new fuse (model # 24-B-57).
6. Re-secure the fuse cap.
7. Reset the GFCI receptacle if needed, then test the unit.

Note: If the unit powers up but some or all components are not responding, reference the TROUBLESHOOTING section.

BURNER REMOVAL

1. Remove the cooking grid and vaporizer panel from above the burner that is to be removed and set them aside.
2. Locate the burner clip (located over the rear center tube of the burner) and slightly pinch and remove the clip from the burner support. See Fig. 38-2.
3. Carefully lift the burner from the burner support anchor peg holes and out from the hole in the forward fire wall.
4. To replace the burner, slide the open cylindrical end of the burner around the orifice, enveloping it and centering on it. Then lower the back end anchor pegs into the burner support anchor peg holes.

Note: It is critical to the continued safe functioning of the burners that the orifices are centered and completely inside the burner gas inlets.
5. Re-install the burner clip around the burner and into the holes in the burner support.
6. Replace the cooking grid and vaporizer panel.
# TROUBLESHOOTING

If you have trouble with the unit, please use this list to identify the problem. By trying one or more of the solutions to the possible cause, you should be able to solve the problem. If this list does not cover your present problem, or if you have other technical difficulties with the unit, please contact your local dealer.

</table>

**Note:** Propane tanks are equipped with a safety shutdown device that may cause low or no gas/flame at the burners if operating and lighting instructions are not followed exactly. **If you suspect the propane tank safety shutoff is in effect:** 1) Shut off all grill valves. 2) Shut off tank valve. 3) Open and close a main burner valve. 4) Open tank valve. 5) Follow the LIGHTING INSTRUCTIONS. Lighting instructions are located in the owner’s manual and printed on the unit’s metal drip tray. If the problem persists, continue troubleshooting, or contact your local dealer or distributor for assistance.

COMMONWEALTH OF MASSACHUSETTS REQUIREMENTS
This appliance is approved for installation in the state of Massachusetts subject to the following requirements:
Install this appliance in accordance with 248 C.M.R., the Rules and Regulations Governing Plumbers and Gas Fitters. The installer or service agent must be a plumber or gas fitter licensed in the Commonwealth of Massachusetts. The flexible gas line connector used must not exceed 36 inches (92 centimeters) in length. The individual manual shut-off must be a T-handle type valve, listed and approved by the state of Massachusetts.

A COPY OF YOUR SALES SLIP FOR PROOF OF PURCHASE IS REQUIRED
This warranty applies to the original purchaser for products which are installed in the United States or Canada and which are operated and maintained as intended for single family residential usage. This warranty is valid only with proof of purchase, shall commence on the date of purchase, and shall terminate (both as to original and any replacement products) on the anniversary date of the original purchase of the product stated on the above schedules.
This warranty covers defects in material and workmanship. This warranty does not cover parts which become defective as a result of negligence, misuse, use not in compliance with the Owner's Manual/Installation Instructions, accidental damage, improper handling, improper storage, improper installation, lack of required routine maintenance (as specified in the Owner's Manual/Installation Instructions), electrical damage, local gas impurities or failure to protect against combustibles. Product must be installed (and gas must be connected) as specified in the Owner's Manual/Installation Instructions by a qualified professional installer. Modifications to products which are not specifically authorized will void this warranty. Accessories, parts, valves, remotes, etc. when used must be Peterson products or this warranty is void. Warrantied items will be repaired or replaced at Peterson's sole discretion. This warranty does not apply to rust, corrosion, oxidation, or discoloration unless the affected part becomes inoperable.
This warranty does not cover labor or labor related charges, except as provided by separate specific written programs from the Peterson Co. All repair work must be performed by a qualified professional service person and requires prior approval of Peterson.
Peterson may require the defective product or part to be returned to the factory to determine the cause of failure. Peterson will pay freight charges if the product or part is determined to be defective. This warranty does not cover breakage in shipment from our (Independent) distributor to its customer if the damage is determined to have occurred during that shipment.
This warranty specifically excludes liability for indirect, incidental, or consequential damages. Some states and provinces do not allow the exclusion or limitation of incidental or consequential damages, so the above exclusion may not apply to you. This warranty gives you specified legal rights, and you may have other rights that vary from state to state or province.
For additional information regarding this warranty, or to place a warranty claim, contact the R. H. Peterson dealer where the product was purchased.
When contacting your Peterson dealer or the R. H. Peterson Co., please provide the following information:
- Your name, address, telephone number, e-mail
- Sales receipt showing where purchased and date purchased
- Model number, serial number of product, date code
- Relevant information: installer, additions, repairs, when defect was first noted

WARRANTY

AMERICAN OUTDOOR GRILL
LIMITED WARRANTY

American Outdoor Grill warrants your grill to be free from defects in material and workmanship.
American Outdoor Grill stainless-steel burners are warranted for as long as the original purchaser owns the grill -- LIFETIME. All other American Outdoor Grill parts are warranted for TEN (10) YEARS. (Except as noted below.)
American Outdoor Grill infrared burners and vaporizer panels are warranted for THREE (3) YEARS.
American Outdoor Grill ignition systems (excluding batteries) and accessories (including sideburners, motors, and thermometers) are warranted for ONE (1) YEAR.

A COPY OF YOUR SALES SLIP FOR PROOF OF PURCHASE IS REQUIRED
This warranty applies to the original purchaser for products which are installed in the United States or Canada and which are operated and maintained as intended for single family residential usage.
